# Introducing: Improved Capture Window

Whether you are looking to take a capture on-the-fly or to customize and save your capture settings for future use, Snagit's new design makes it simpler to switch between the capture options.

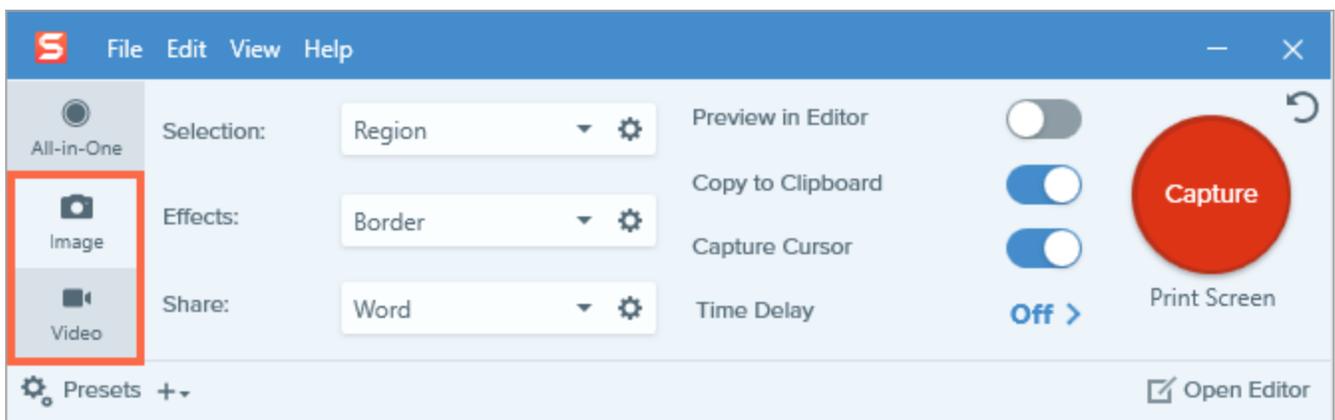

- **For Quick Captures**

With All-in-One capture, you can choose to capture an image, a panoramic scrolling image, or a video on-the-fly. Snagit has default capture settings to help you capture at any time.

- **For Custom or Repeated Captures**

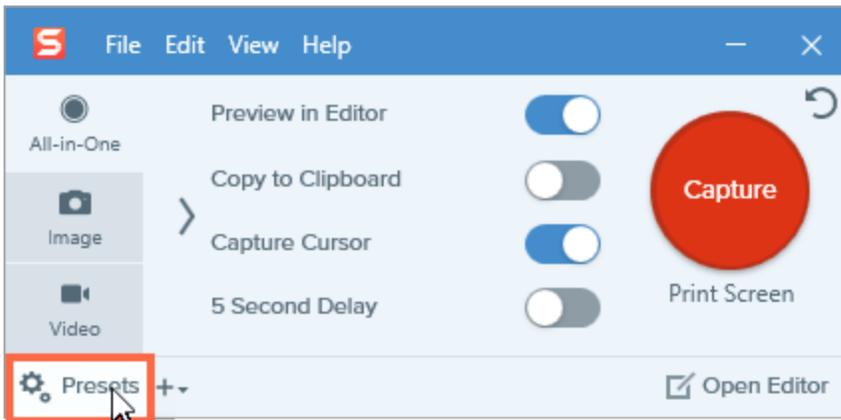

Use the Image and Video tabs to customize the settings to meet your needs. You can add image effects, automatically share a capture to a destination, set up a webcam recording device, and other customizations.

See .

## Presets

Set up a preset to automatically remember your capture settings.

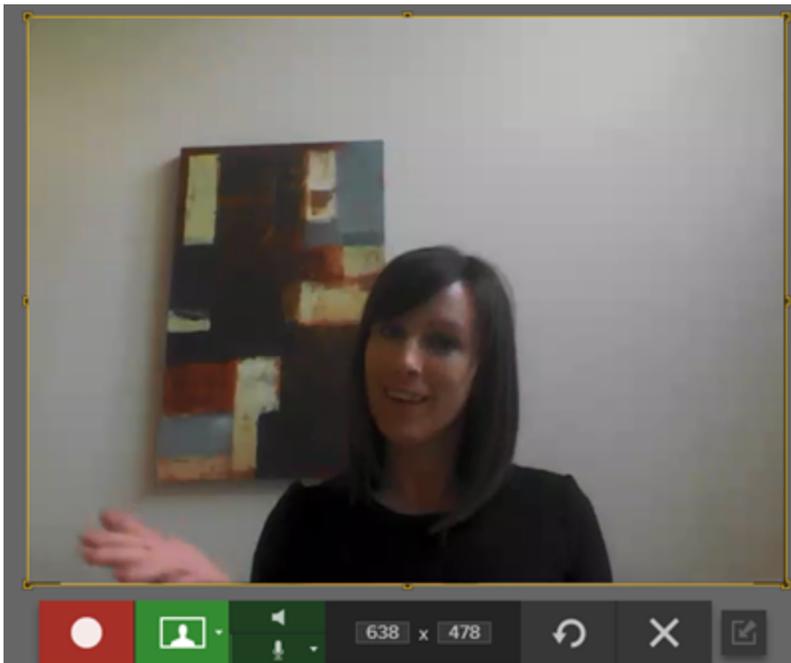

Use presets to:

- Save commonly used capture settings.
- Eliminate the setup time before each capture.
- Quickly switch between capture types based on the task at hand.
- Reduce the editing required by automatically adding effects or selecting the share location.

See .

## Introducing: Webcam Recording

Record yourself with a webcam in Snagit. Quickly switch between displaying the speaker or the screen during a video recording.

Record a webcam to:

- Capture nonverbal cues that often get lost with only recording voice narration.
- Better connect with your audience.
- Record demos on a tablet or mobile device.
- Introduce a new topic or speaker in the video.

See .

## Introducing: Panoramic Capture

---

## Introducing Themes

Themes consist of a set of unique [Quick Styles](#) for each project, organization, or style guidelines you work with. Create and share your styles with others to create a consistent look.

See .

## Introducing Auto-Fill Background

When moving or deleting items in an image, Snagit can automatically fill the removed area to match the surrounding content. Use auto-fill to quickly rearrange or erase items such as text, buttons, logos, icons when creating interface or website mockups.

See

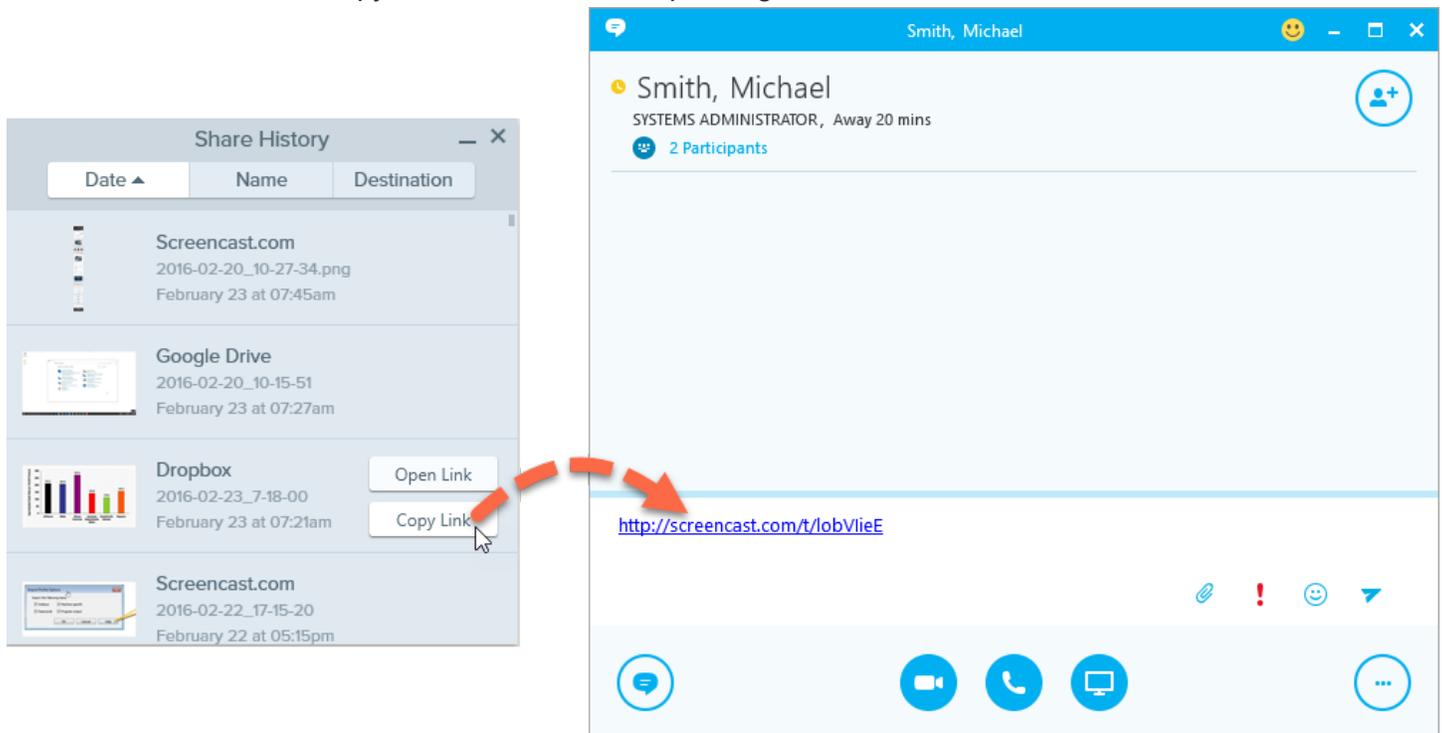

## Introducing Magic Wand

The Magic Wand tool selects an area on the canvas based on color. Use this tool to remove a background or replace the color in objects such as text or logos throughout an image.

See .
