Introducing: Improved Capture Window

Whether you are looking to take a capture on-the-fly or to customize and save your capture settings for future use, Snagit's new design makes it simpler to switch between the capture options.

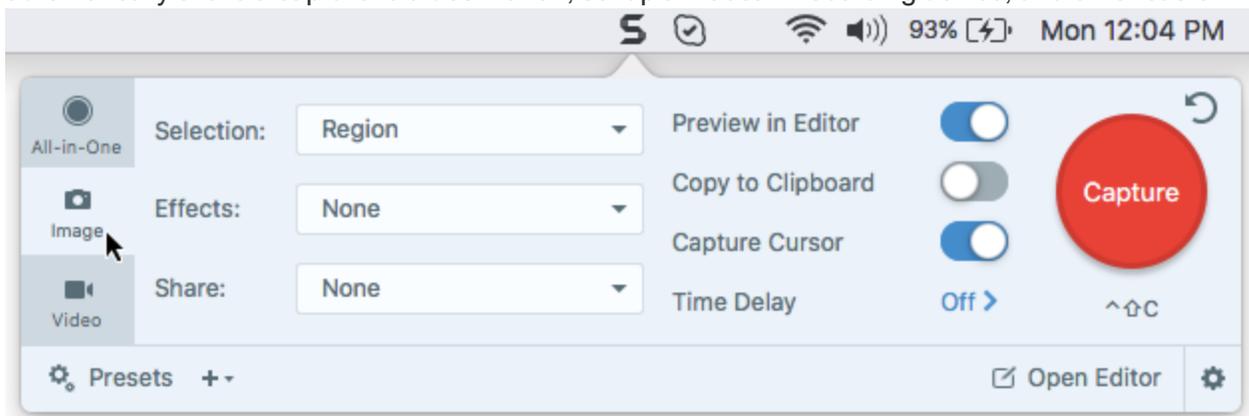

- **For Quick Captures**

With All-in-One capture, you can choose to capture an image, a panoramic scrolling image, or a video on-the-fly. Snagit has default capture settings to help you capture at any time.

- **For Custom or Repeated Captures**

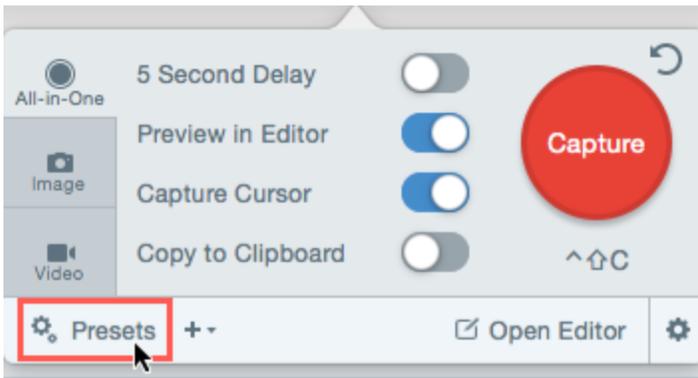

Use the Image and Video tabs to customize the settings to meet your needs. You can add image effects, automatically share a capture to a destination, set up a webcam recording device, and other customizations.

See [Capture Window Overview](#).

Presets

Set up a preset to automatically remember your capture settings.

Use presets to:

- Save commonly used capture settings.
- Eliminate the setup time before each capture.
- Quickly switch between capture types based on the task at hand.
- Reduce the editing required by automatically adding effects or selecting the share location.

See [Save Capture Settings with Presets](#).

[Save Capture Settings with Presets](#)

Introducing: Panoramic Capture

The Panoramic Scrolling Capture preset captures a continuous area within a window by manually panning or scrolling the window's contents.

See [Panoramic Scrolling Capture](#).

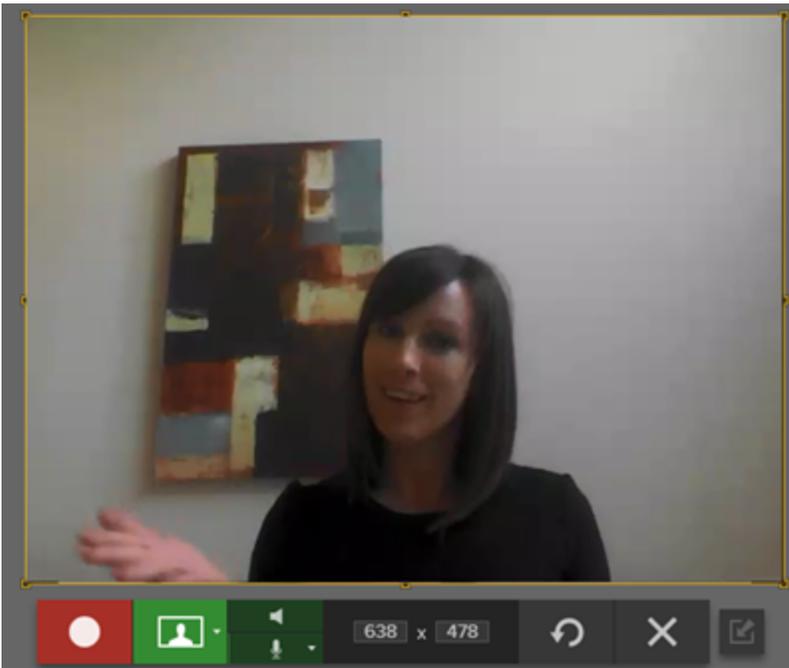

Related Articles

[Panoramic Scrolling Capture](#)

[Capture a Scrolling Window](#)

Introducing: Webcam Recording

Record yourself with a webcam in Snagit. Quickly switch between displaying the speaker or the screen during a video recording.

Record a webcam to:

- Capture nonverbal cues that often get lost with only recording voice narration.
- Better connect with your audience.
- Record demos on a tablet or mobile device.
- Introduce a new topic or speaker in the video.

See [Record a Video](#).

Related Articles

[Record a Video](#)

Introducing: Customize the Snagit Editor Toolbar

Customize the editing toolbar for quick access to your favorite tools, effects, and share destinations.

Add, remove, or arrange the options on the toolbar. To customize the toolbar, click More > Customize Toolbar. Drag the desired options into the toolbar.

See [Customize the Snagit Editor Toolbar](#).

[Themes](#)

[Create a Theme](#)

[Edit a Theme](#)

Introducing Auto-Fill Background

When moving or deleting items in an image, Snagit can automatically fill the removed area to match the surrounding content. Use auto-fill to quickly rearrange or erase items such as text, buttons, logos, icons when creating interface or website mockups.

See [Selection](#).

Related Articles

[Selection](#)

Introducing Magic Wand

The Magic Wand tool selects an area on the canvas based on color. Use this tool to remove a background or replace the color in objects such as text or logos throughout an image.

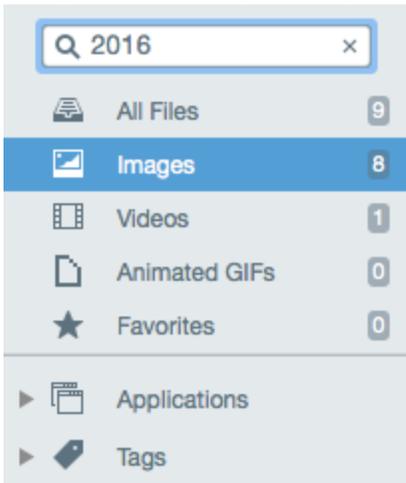

See [Magic Wand](#).

Related Articles

[Magic Wand](#)

Introducing Capture History (Library)

Snagit automatically saves your capture history to the library including any files opened or edited in Snagit Editor.

Snagit makes it easy to tag and find captures at a later time. Use the Search pane to browse or search for captures by name, file format, date, application, website, or custom tags.

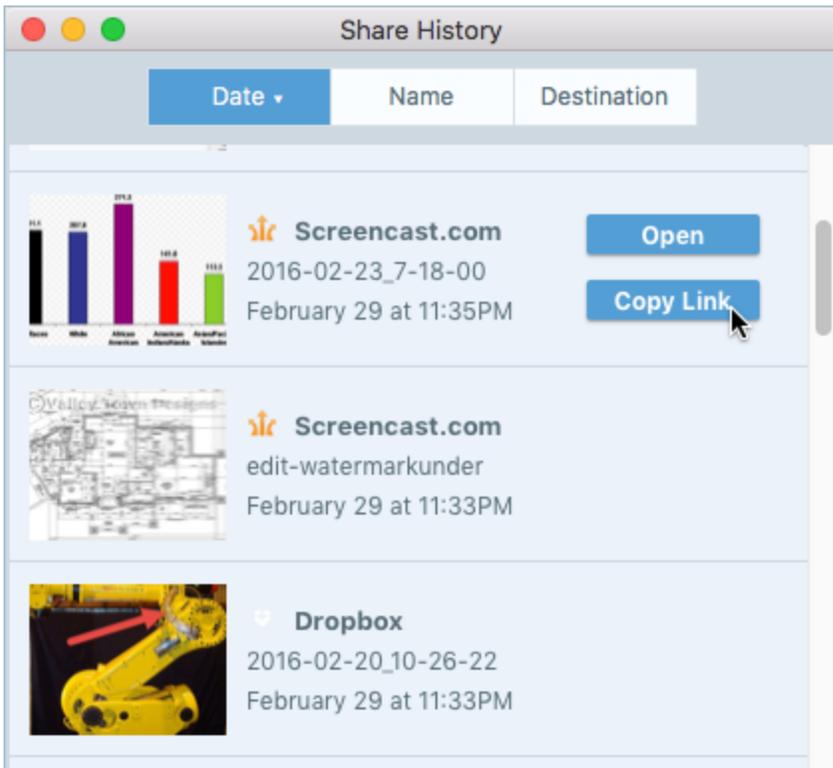

Related Articles

[View the Capture History \(Library\)](#)

[Add Tags to Organize Captures](#)

Introducing: Share History

Snagit remembers the captures you've shared. Use the Share History to quickly open the capture in its shared location or to copy the link to share the capture again.

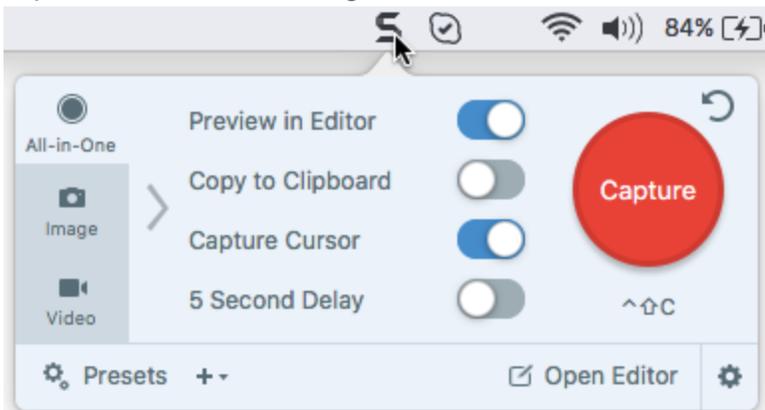

To open your share history in Snagit Editor, click the Share button > Share History. To learn more, see [Share History](#).

Related Articles

[Share History](#)

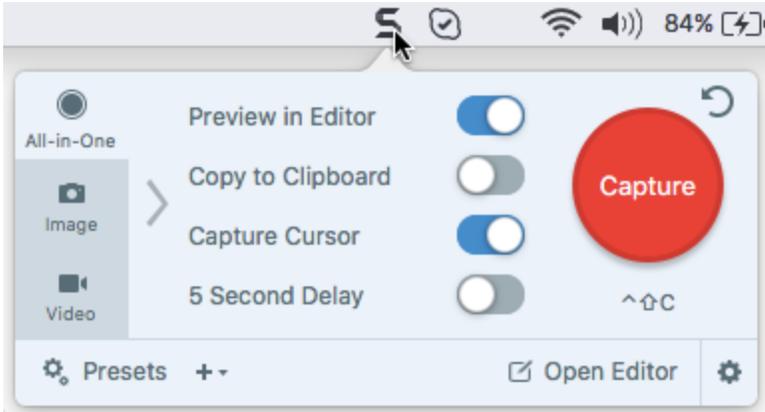

Capture Window Overview

The Capture window provides the flexibility to meet your capture needs. Take a quick capture, a customized screen capture, or a video recording.

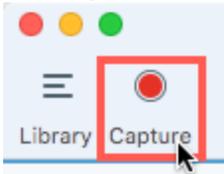

To open the Capture window:

- Click the  icon in the menu bar.

- In Snagit Editor, click the **Capture** button to open the Capture window on the screen.

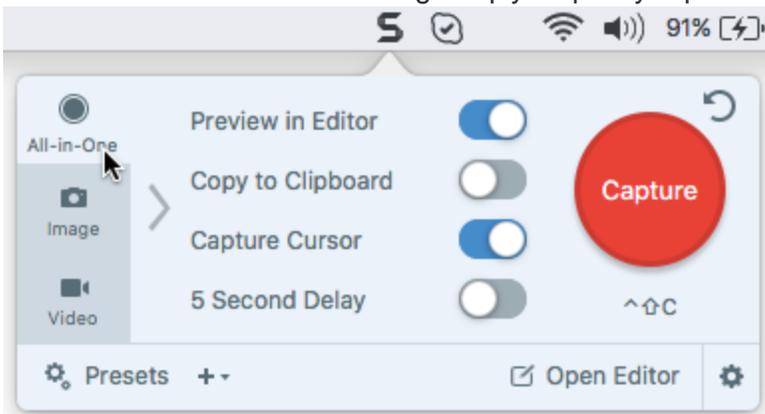

To turn on the dockable capture window, OneClick, select **Snagit > Preferences > General tab > Snagit Shows > OneClick tab**.

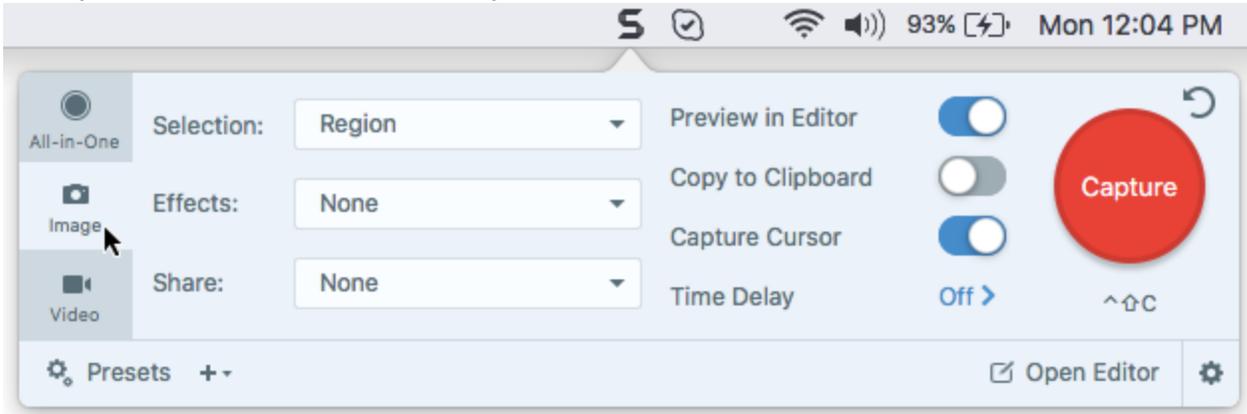

Capture Tabs

The Capture window is designed for quick and flexible capture. Switch tabs to choose between image, video, or the quick All-in-One capture settings.

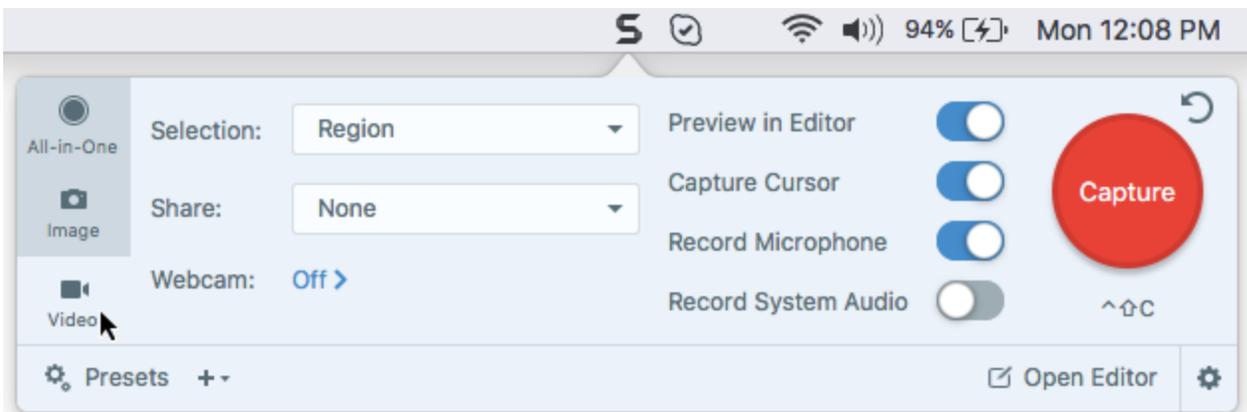

- All-in-One Tab:** The default settings help you quickly capture an image, video, or panoramic capture on-the-fly.

- **Image Tab:** Customize the image capture settings to meet your needs. Automatically add effects, share directly to a destination, add a time delay, and much more.

- **Video Tab:** Customize the video capture settings to meet your needs. Set up audio or a webcam device for the video.

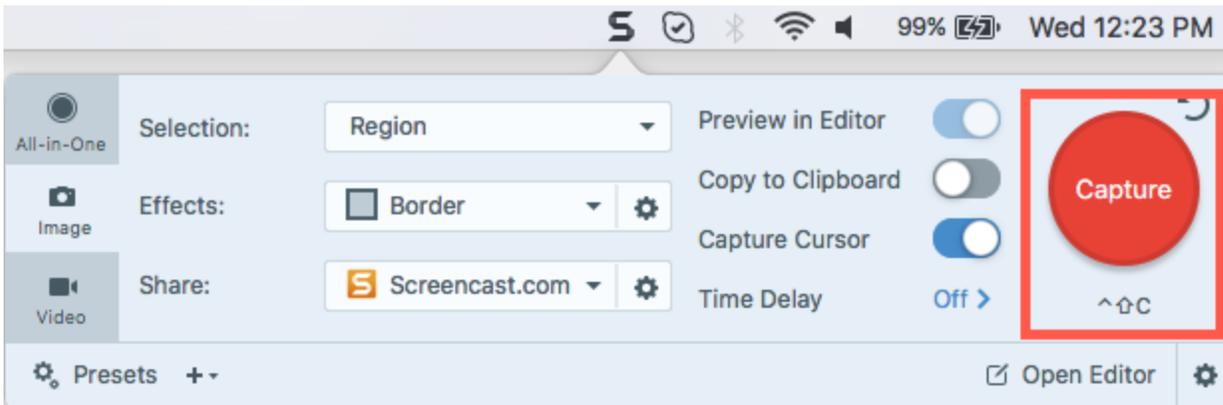

To learn more about the settings on each tab, see the following topics:

- [All-in-One Tab Settings](#)
- [Image Tab Settings](#)
- [Video Tab Settings](#)

Capture Button

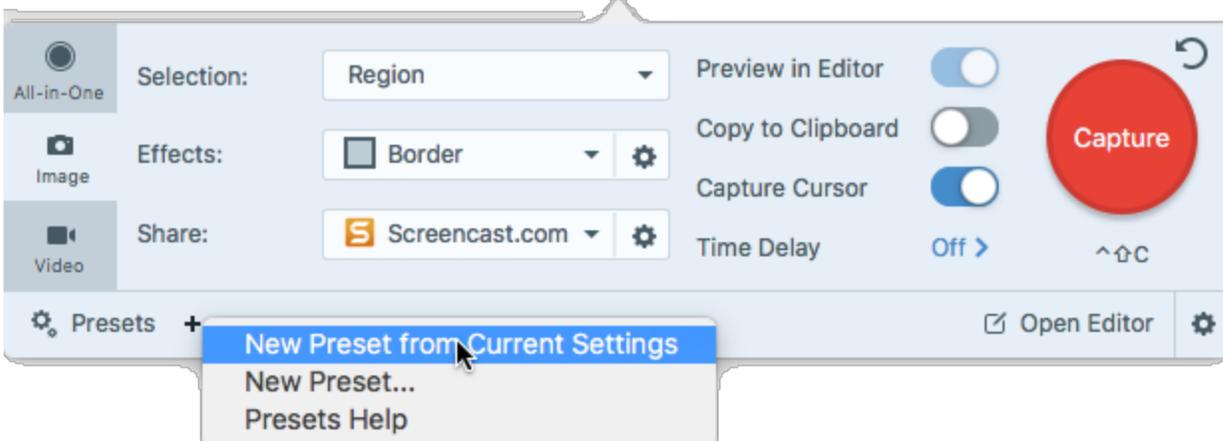

Click the **Capture** button on any tab in the Capture window to start a capture with the current settings. You can also start a capture with the current settings by pressing **Control-Shift-C**, the global capture keyboard shortcut. To learn how to customize the keyboard shortcut, see [Change the Global Capture Keyboard Shortcut](#).

In the example above, when you click the **Capture** button, Snagit captures an image with a border and shares it to Screencast.com.

Save Capture Settings with Presets

Set up a preset to automatically remember your capture settings.

Use presets to:

- Save commonly used capture settings.
- Eliminate the setup time before each capture.
- Quickly switch between capture types based on the task at hand.
- Reduce the editing required by automatically adding effects or selecting the share location.

See [Save Capture Settings with Presets](#).

Discover New Ways to Capture with Snagit

To discover more ways to capture with Snagit, see [What Do You Want to Capture?](#)

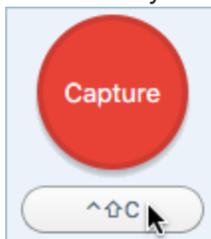

Change the Capture Keyboard Shortcut

The global capture keyboard shortcut, Control-Shift-C, starts a capture with the currently selected settings in the [Capture window](#). Use the global capture keyboard shortcut instead of the Capture button to:

- Maintain the cursor's position on the screen during capture.
- Quickly capture without interacting with the Capture window.

Change the Global Capture Keyboard Shortcut

1. [Open](#) the Capture window.
2. Click the keyboard shortcut under the Capture button.

3. Press the desired key combination on the keyboard.

The new keyboard shortcut appears in the field.

Capture an Image

Use Snagit to capture a snapshot of anything on your screen.

Capture an Image with All-in-One

The All-in-One tab provides settings to help you quickly capture an image or video capture on-the-fly.

1. In the Capture window, select the **All-in-One** tab.

2. Click the **Capture** button or press **Control-Shift-C**.

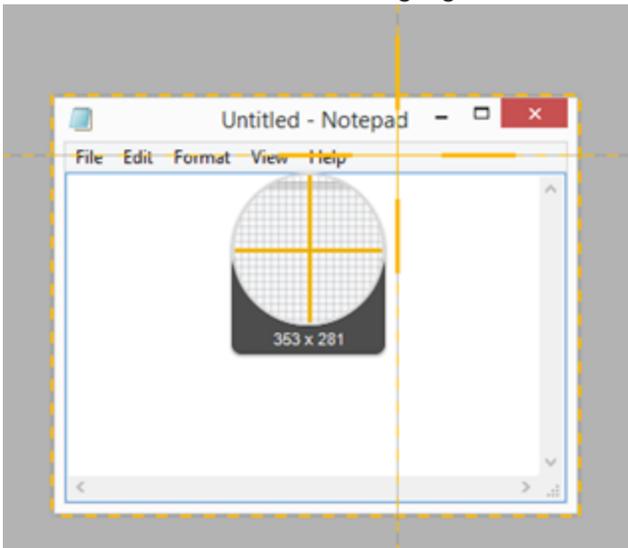

3. The orange crosshairs appear. Complete one of the following to select the area to capture:

- **Fullscreen:** Click the **Fullscreen** button to capture the entire screen.

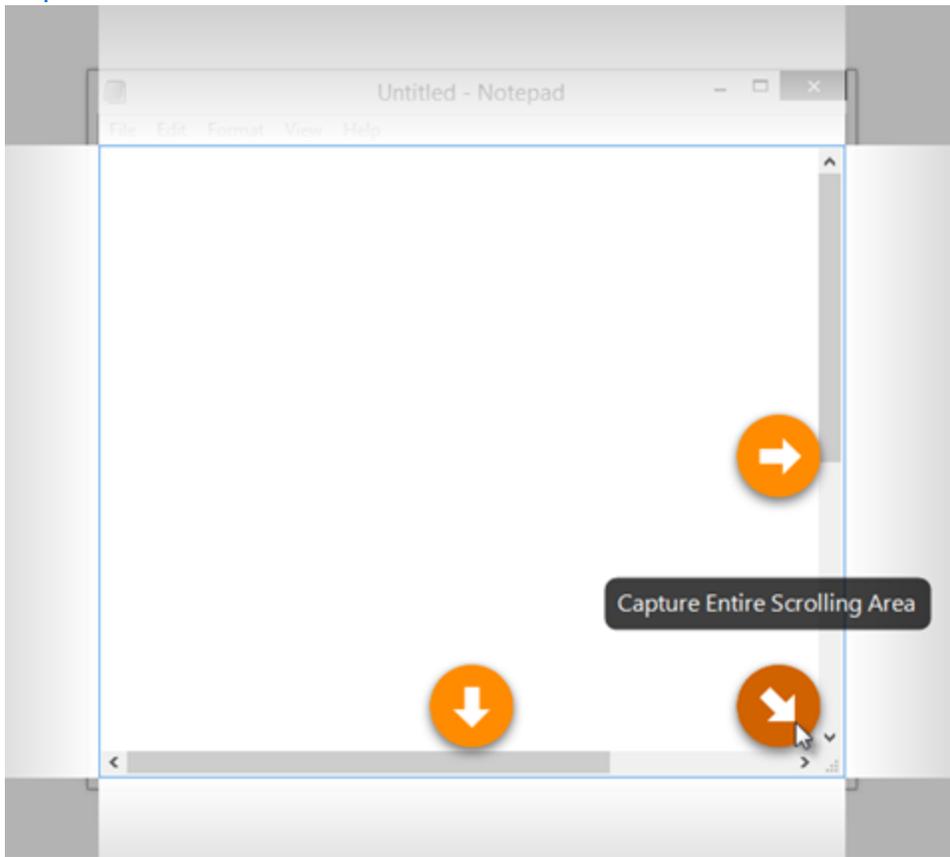

- **Window:** Move the cursor over the window to capture. When an orange dashed border appears around the window, click to select the highlighted area.

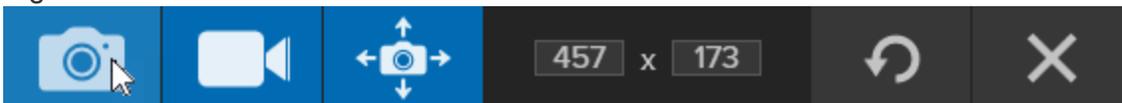

- **Region:** Click and drag to select the desired area on the screen.
- **Scrolling Area:** Move the cursor over the window. Click an arrow to capture the horizontal scrolling area, the vertical scrolling area, or the entire scrolling area. If arrows do not appear, see [Panoramic Scrolling](#)

Capture.

4. To edit the selected area, complete any of the following:
 - Drag the handles to adjust the selection.
 - To enter a specific size, type custom dimensions in pixels into the **Width** and **Height** fields.
 - To move the selected area on the screen, click within the highlighted area and drag the selection to the desired location.
5. Click the **Image Capture** button to finalize the capture when capturing the entire screen, a window, or a region.

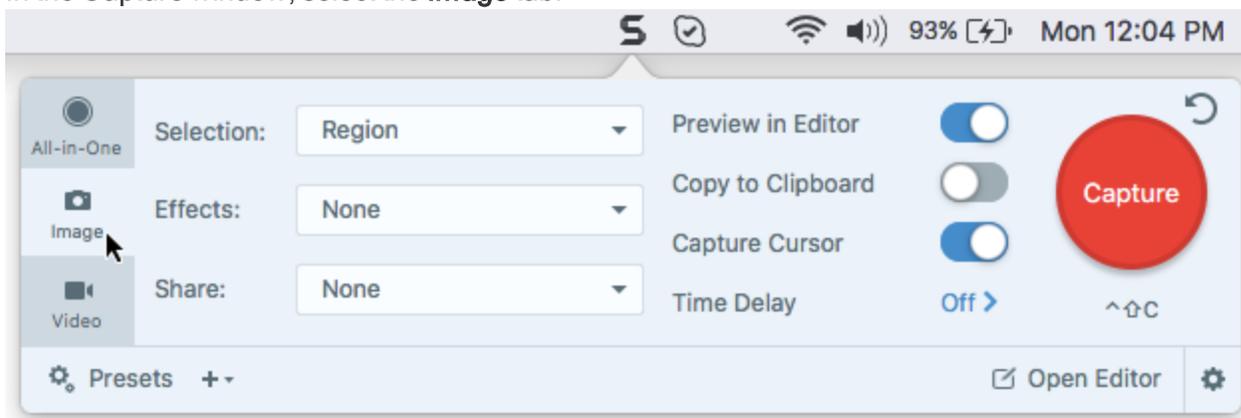

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

Set Up an Image Capture

The Image tab allows you to customize the capture.

1. In the Capture window, select the **Image** tab.

2. Choose an option from the **Selection** dropdown.
3. Add an effect, select a share destination, or customize the other capture options on the Image tab. See [Image Tab Settings](#).
4. Click the **Capture** button or press **Control-Shift-C**.

5. For more information on how to capture for each Selection option, see [What Do You Want to Capture?](#)

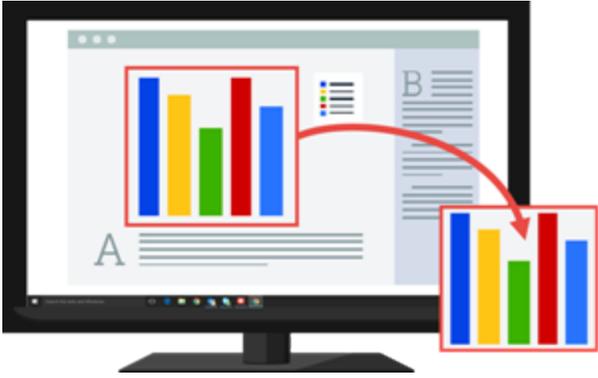

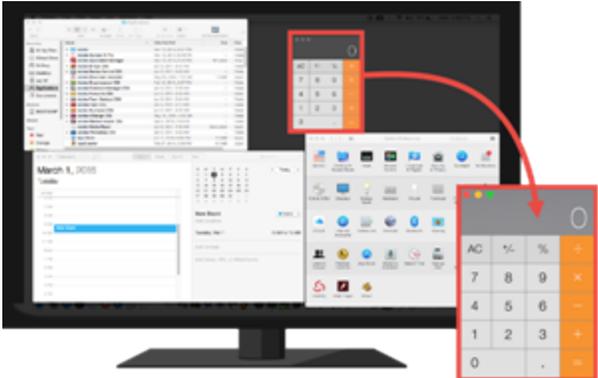

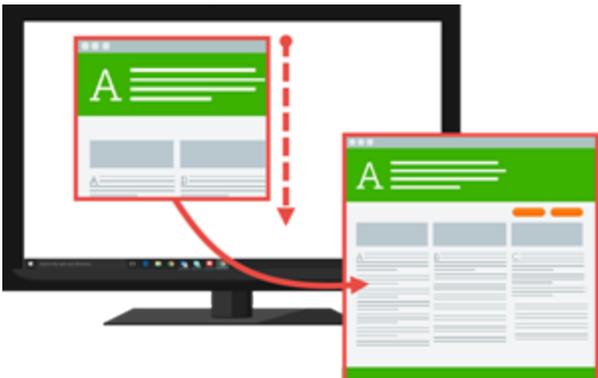

TIP: Save a Preset

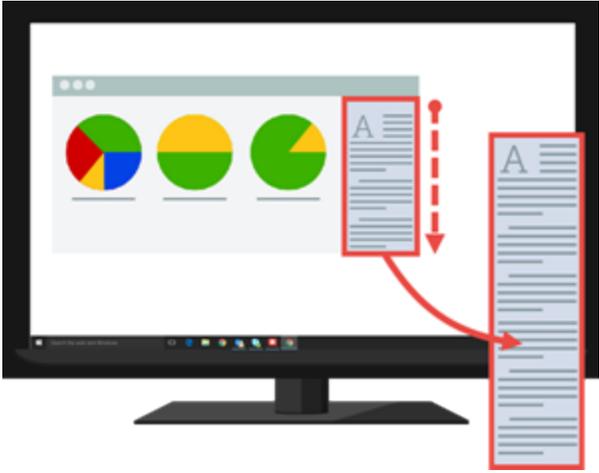

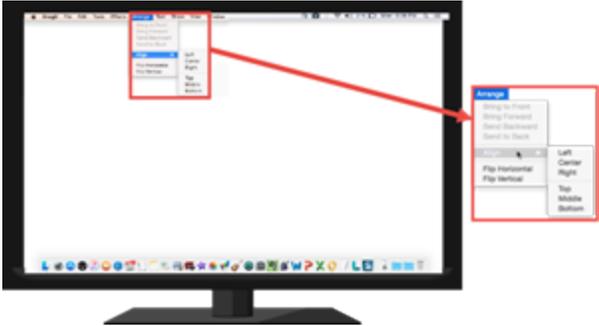

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

What Do You Want to Capture?

Discover the many ways to capture with Snagit to meet your needs.

Capture Option	Description
Capture an Image	Capture an image snapshot of anything on your screen.
Capture a Region	Capture a portion of the screen.

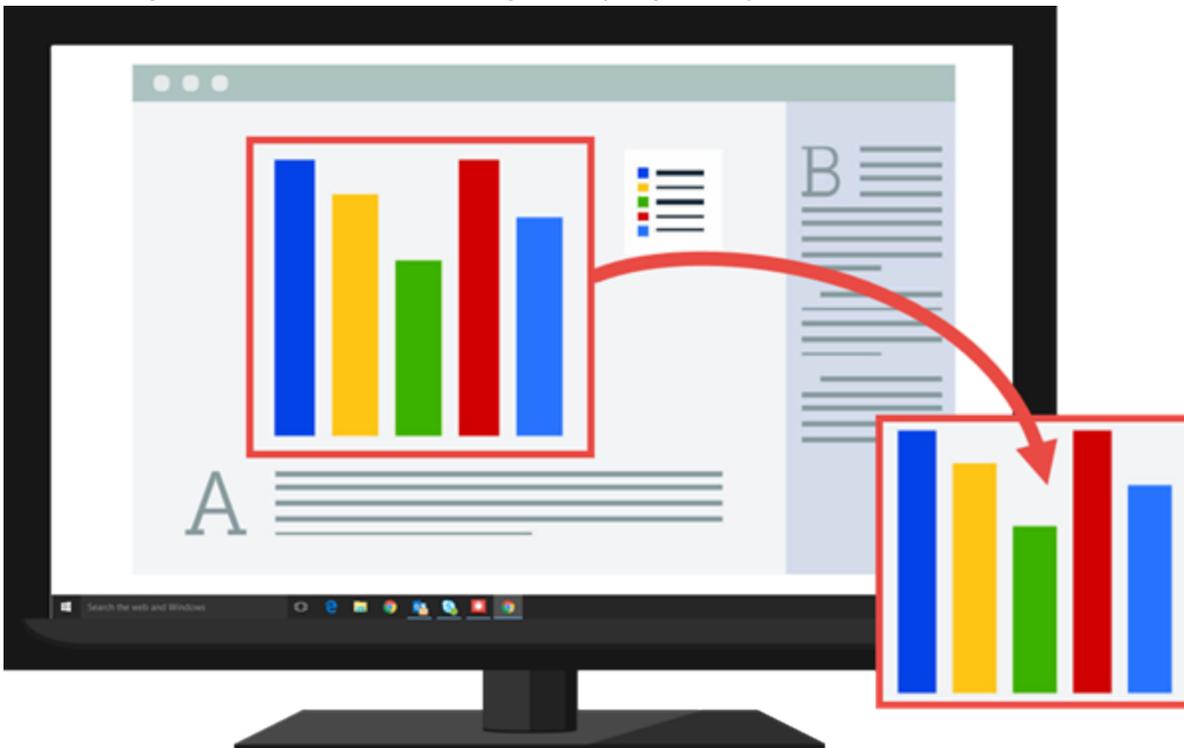

Capture Option	Description
	
<p>Capture the Entire Screen</p>	<p>Capture the full screen. If you have multiple monitors, you can only select one screen at a time.</p>
<p>Capture an Open or Hidden Window</p> 	<p>Capture an image of an open or hidden window on the screen.</p>
<p>Capture a Scrolling Window</p> 	<p>Capture the entire contents of a web browser or application window including the content that extends beyond the visible area in the window.</p>
<p>Panoramic Scrolling Capture</p>	<p>Capture a continuous area within a window by manually panning or scrolling the window's contents.</p>

Capture Option	Description

Capture Option	Description
Capture with a Preset	<p>Presets automatically remember your capture settings. Use presets to:</p> <ul style="list-style-type: none"> • Save commonly used capture settings. • Eliminate the setup time before each capture. • Quickly switch between capture types based on the task at hand. • Reduce the editing required by automatically adding effects or selecting the share location.
Record a Video	Record the action on the screen, the web camera, or audio (from a microphone or system audio) as a MP4 video file.

Capture a Region

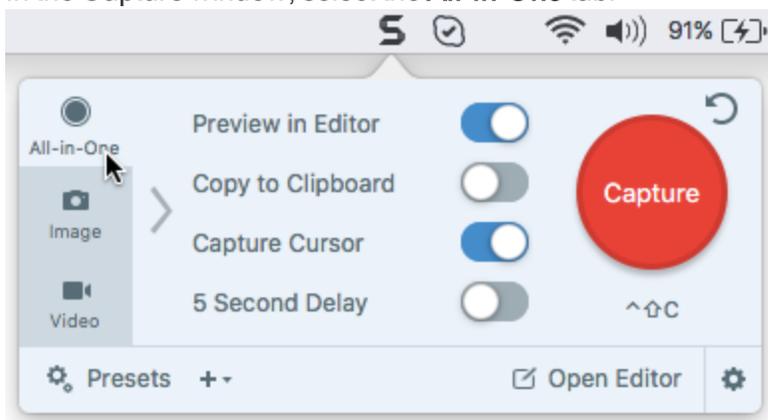

Use the Region option to capture an image of any region on your screen.

Capture a Region with All-in-One

The All-in-One tab provides preselected default settings to help you quickly capture an image or video capture on-the-fly.

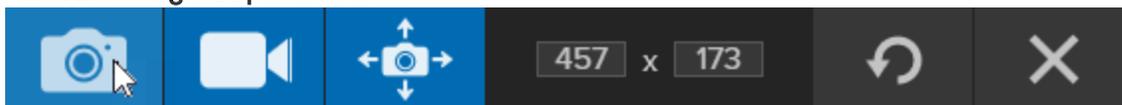

1. In the Capture window, select the **All-in-One** tab.

2. Click the **Capture** button or press **Control-Shift-C**.

3. The orange crosshairs appear. Click and drag to select the desired area on the screen.
4. Click the **Image Capture** button.

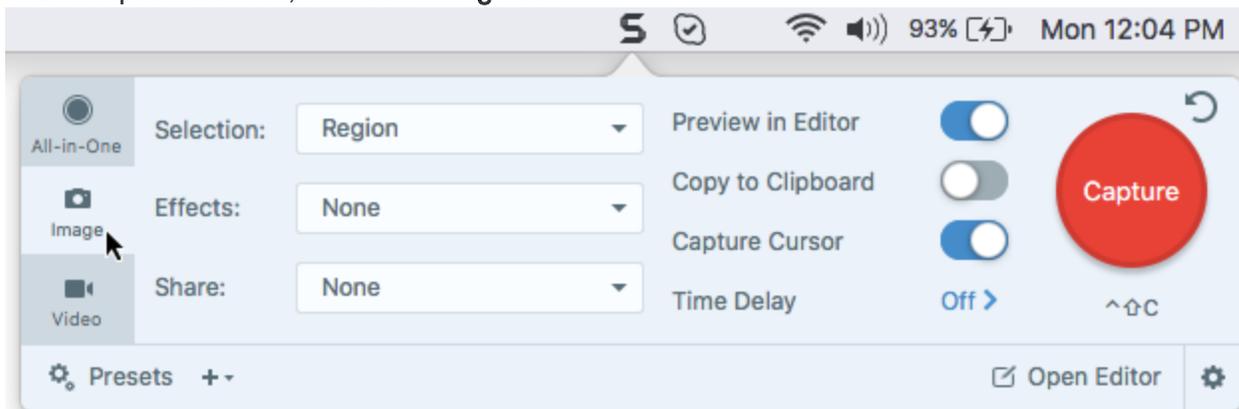

The capture opens in Snagit Editor where you can preview, edit, and share the capture.

Set Up a Region Capture

The Image tab allows you to customize the region capture.

1. In the Capture window, select the **Image** tab.

2. In the Selection dropdown, select **Region**.

3. Add an effect, select a share destination, or customize the other capture options on the Image tab. See [Image Tab Settings](#).
4. Click the **Capture** button or press **Control-Shift-C**.

5. The orange crosshairs appear. Click and drag to select the desired area on the screen.

TIP: Save a Preset

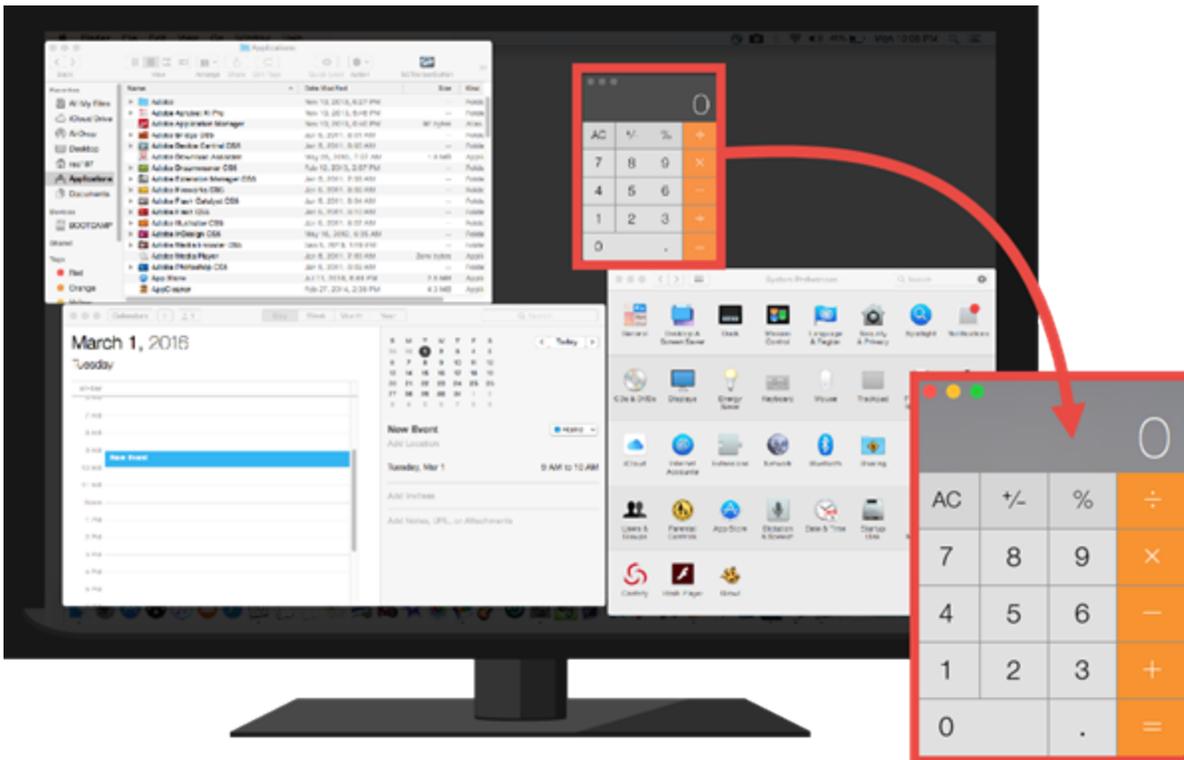

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

Related Articles

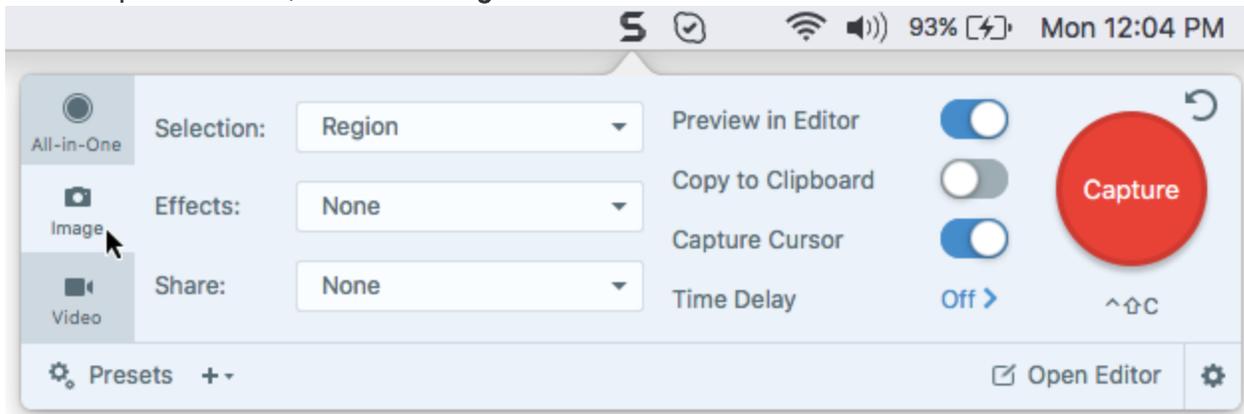

[Image Tab Settings](#)

Capture an Open or Hidden Window

Use the Mission Control option to capture an image of an open or hidden window on the screen. Mission Control capture displays all the currently open windows on the screen.

1. In the Capture window, select the Image tab.

2. In the Selection dropdown, select **Mission Control**.
3. Add an effect, select a share destination, or customize the other capture options on the Image tab. See [Image Tab Settings](#).
4. Click the **Capture** button or press **Control-Shift-C**.

5. Snagit displays all the open windows on the screen. Move the cursor over the window to capture. Click to capture the window.

TIP: Save a Preset

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

Capture the Entire Screen

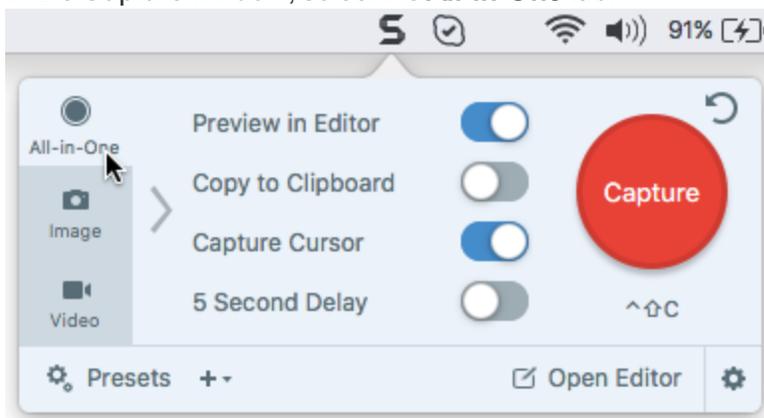

Use the Fullscreen option to capture an image of the entire screen.

If you have multiple monitors, the **Fullscreen** option only captures one monitor.

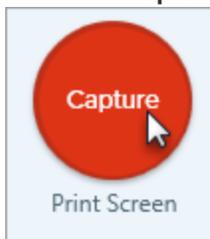

Capture with All-in-One

The All-in-One tab provides preselected default settings to help you quickly capture an image or video capture on-the-fly.

1. In the Capture window, select the **All-in-One** tab.

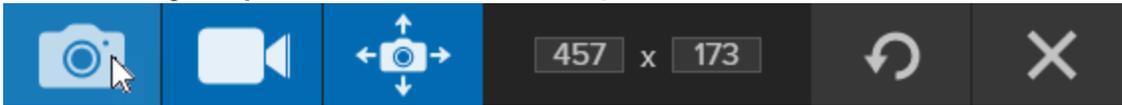

2. Click the **Capture** button or press **Control-Shift-C**.

3. The orange crosshairs appear. Click the **Fullscreen** button to capture the entire screen.

4. Click the **Image Capture** button to finalize the capture.

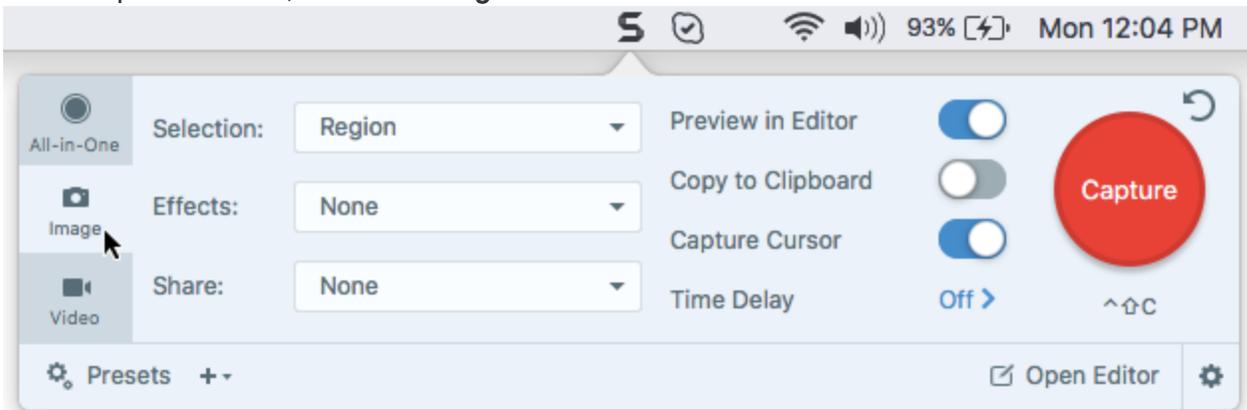

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

Set Up an Image Capture

The Image tab allows you to customize the capture.

1. In the Capture window, select the **Image** tab.

2. In the Selection dropdown, select the **Fullscreen** option.
3. Add an effect, select a share destination, or customize the other capture options on the Image tab. See [Image Tab Settings](#).
4. Click the **Capture** button or press **Control-Shift-C**.

Snagit captures an image of the entire screen.

TIP: Save a Preset

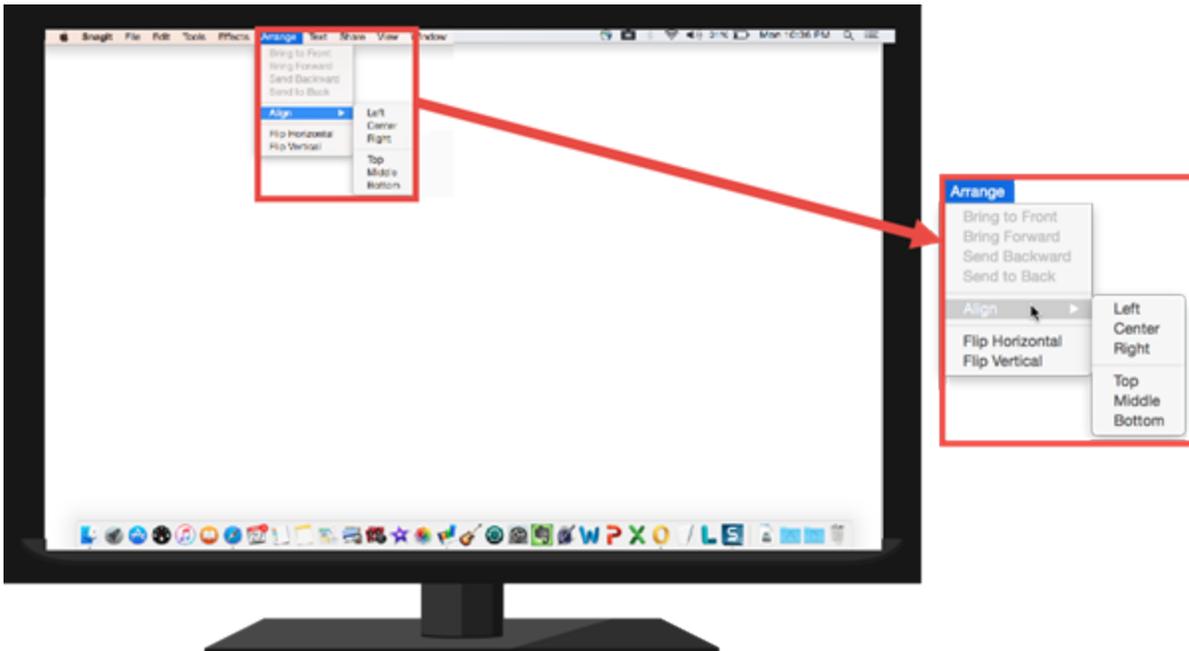

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

Related Articles

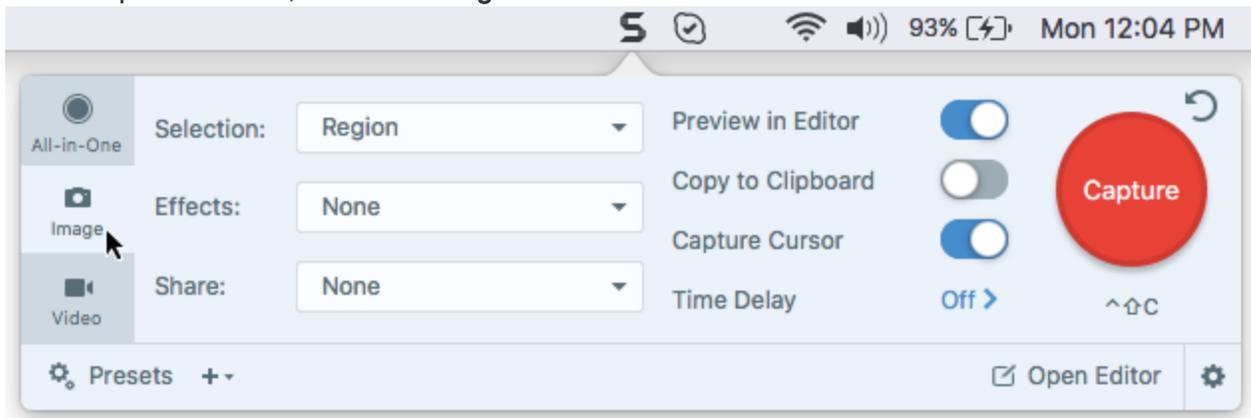

[Image Tab Settings](#)

Capture a Menu

Use the Menu option to capture a dropdown or cascading menu.

1. In the Capture window, select the **Image** tab.

2. In the Selection dropdown, select **Menu**.
3. Click the **Capture** button or press **Control-Shift-C**.

4. Move the cursor over the menu to capture. Press **Control-Shift-E** to capture the menu.

TIP: Save a Preset

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

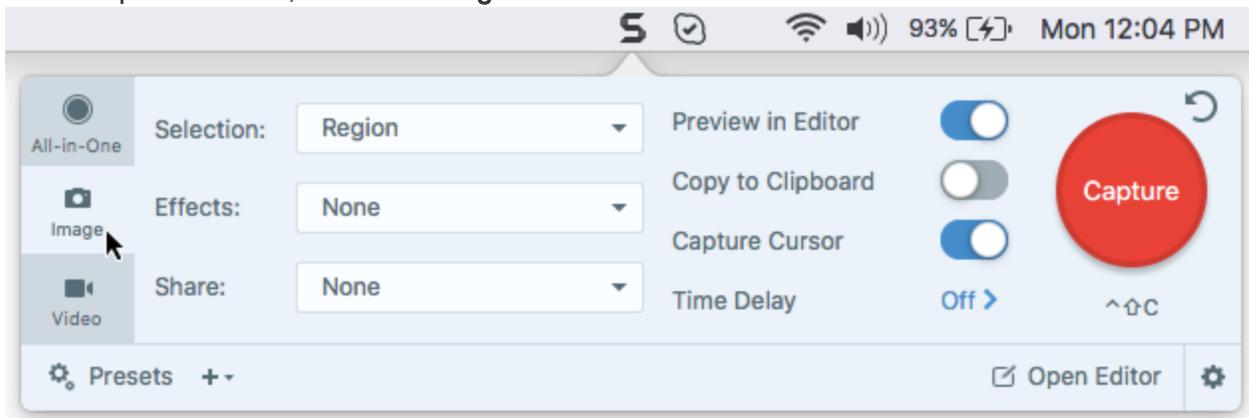

Related Articles

[Image Tab Settings](#)

Set Up a Time-Delayed Capture

Use the Delay option to add extra time before starting the capture to open a menu or set up items on the screen.

1. In the Capture window, select the **Image** tab.

2. Choose an option from the **Selection** dropdown.
3. Add an effect, select a share destination, or customize the other capture options on the Image tab. See [Image Tab Settings](#).
4. Enable the **Time Delay** option.
5. Enter the number of seconds for the delay.
6. Click the **Capture** button or press **Control-Shift-C**.

7. The countdown begins in the bottom-right corner of the screen. Open or set up what you want to capture on the screen.

TIP: Save a Preset

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

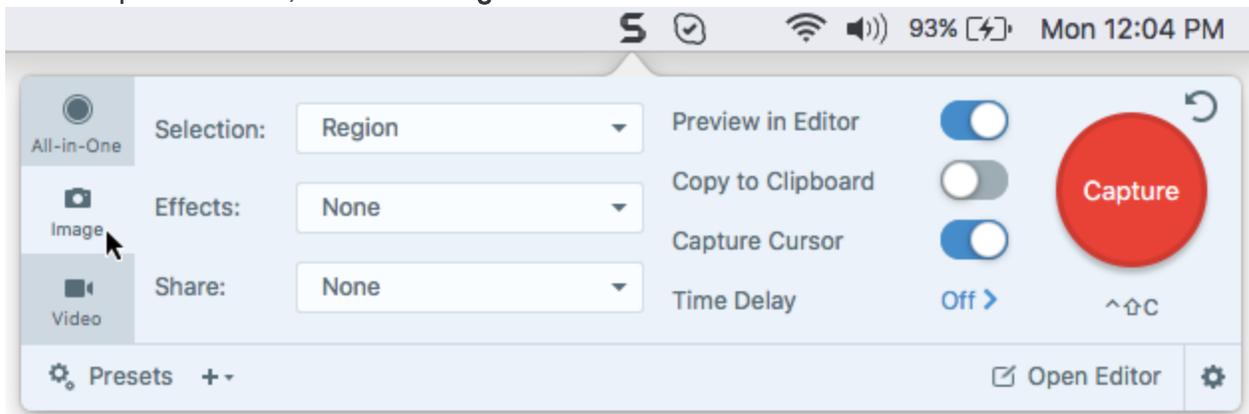

Related Articles

Save Capture Settings with Presets

Set up a preset to automatically remember your capture settings. Use presets to:

- Save commonly used capture settings.
- Eliminate the setup time before each capture.
- Quickly switch between capture types based on the task at hand.
- Reduce the editing required by automatically adding effects or selecting the share location.

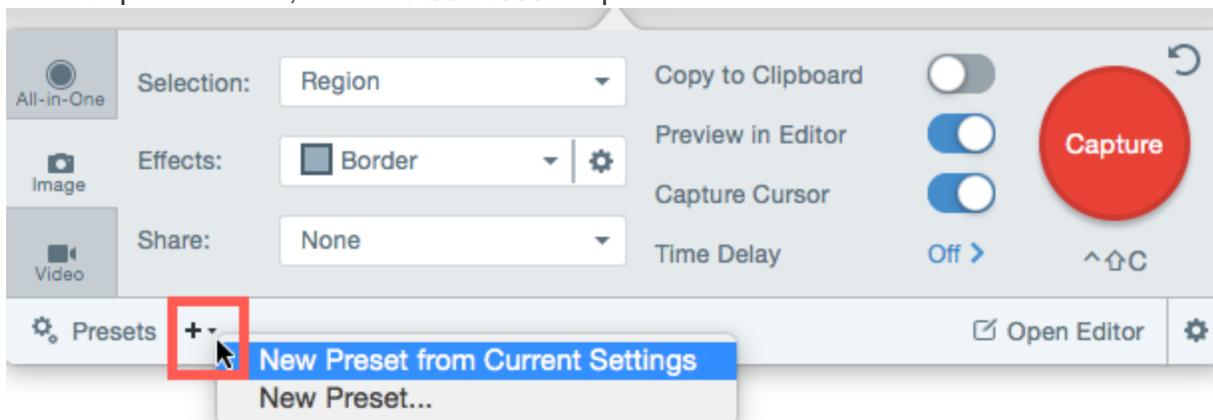

Snagit provides some default presets to get you started. Click the **Presets** button in the Capture window to show the list of presets.

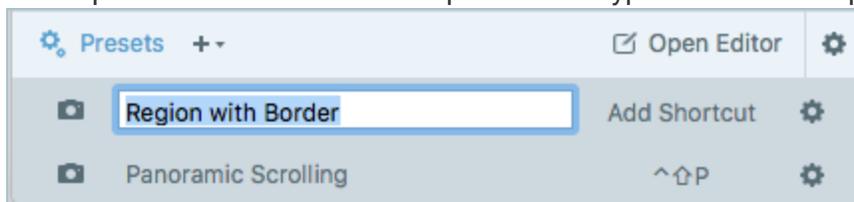

Add a Preset from the Current Settings

Quickly add a new preset based on the currently selected settings on the tab.

1. In the Capture window, click the **Add Preset** dropdown.

2. Select the **New preset from current settings** option from the dropdown.
3. A new preset is added to the saved presets list. Type a name for the preset and press **Enter**.

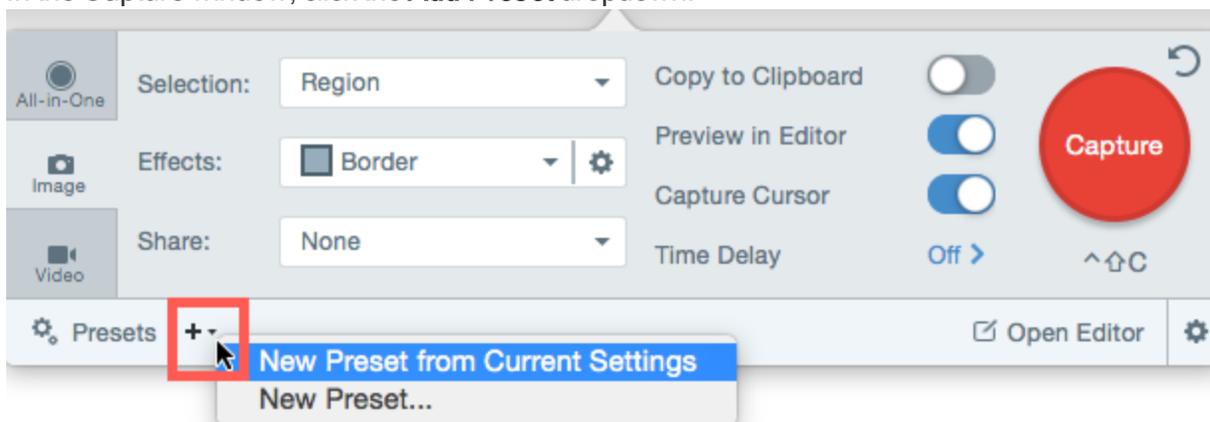

4. To assign a hotkey, click **Add Hotkey**.
5. Press the desired key combination on the keyboard to set the hotkey.

To learn how to use the new preset, see [Capture with a Preset](#).

Add a New Preset

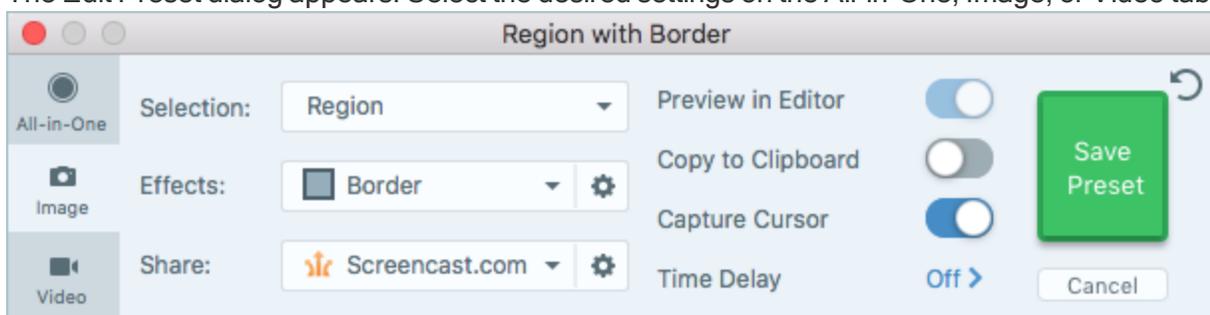

Use the **New Preset** option to select the desired settings to create a new preset.

1. In the Capture window, click the **Add Preset** dropdown.

2. Select the **New preset** option from the dropdown.

3. The Edit Preset dialog appears. Select the desired settings on the All-in-One, Image, or Video tab.

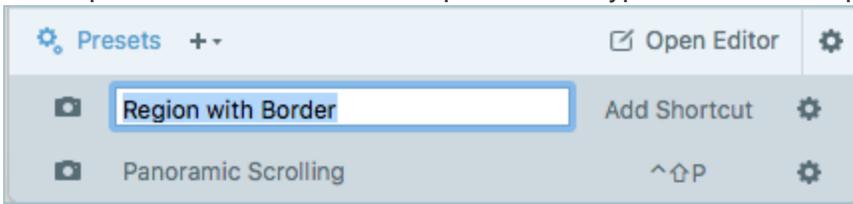

- **All-in-One tab:** Set up a preset where you can choose to capture an image or a video on-the-fly.
- **Image tab:** Set up a preset that captures an image with additional settings such as effects and sharing destinations.
- **Video tab:** Set up a preset that records a video with additional settings such as audio and a webcam.

Snagit only saves the settings on the currently selected tab. If you switch between tabs, the settings from the other tabs are not included in the current preset.

4. Click the **Save Preset** button.

5. A new preset is added to the saved presets list. Type a name for the preset and press **Enter**.

6. To assign a hotkey, click **Add Hotkey**.
7. Press the desired key combination on the keyboard to set the hotkey.

To learn how to use the new preset, see [Capture with a Preset](#).

Capture with a Preset

Presets automatically remember your capture settings. Use presets to:

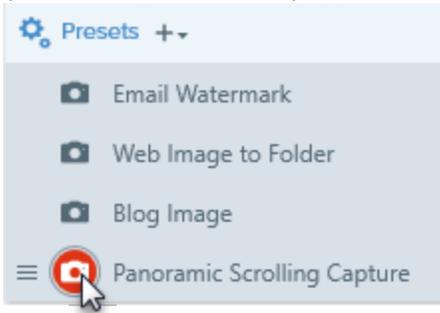

- Save commonly used capture settings.
- Eliminate the setup time before each capture.
- Quickly switch between capture types based on the task at hand.
- Reduce the editing required by automatically adding effects or selecting the share location.

Start a Capture using a Preset

1. Open or set up what you want to capture on the screen.
2. In the Capture window, click the **Presets** button.

3. The list of available presets expands. Hover your cursor over the desired preset until a red capture icon (Preset Capture button) appears.

4. Click the **Preset Capture** button to start the capture.

Assign a Preset Keyboard Shortcut

Set up a [preset](#) to automatically remember your capture settings. You can assign a custom keyboard shortcut to each preset to:

- Maintain the cursor's position on the screen.
- Immediately start captures without interacting with the Snagit application.
- Save time by quickly taking multiple captures with unique captures settings, eliminating the time it takes to set up captures individually.

Assign or Change a Preset Keyboard Shortcut

1. In the Capture window, click the **Presets** button.

2. The list of presets expands. To assign a keyboard shortcut, click **Add Shortcut**.

3. Press the desired key combination on the keyboard to set the keyboard shortcut.

Capture a Scrolling Window

Snagit can capture the entire contents of a web browser or application window including the content that extends beyond the visible area in the window.

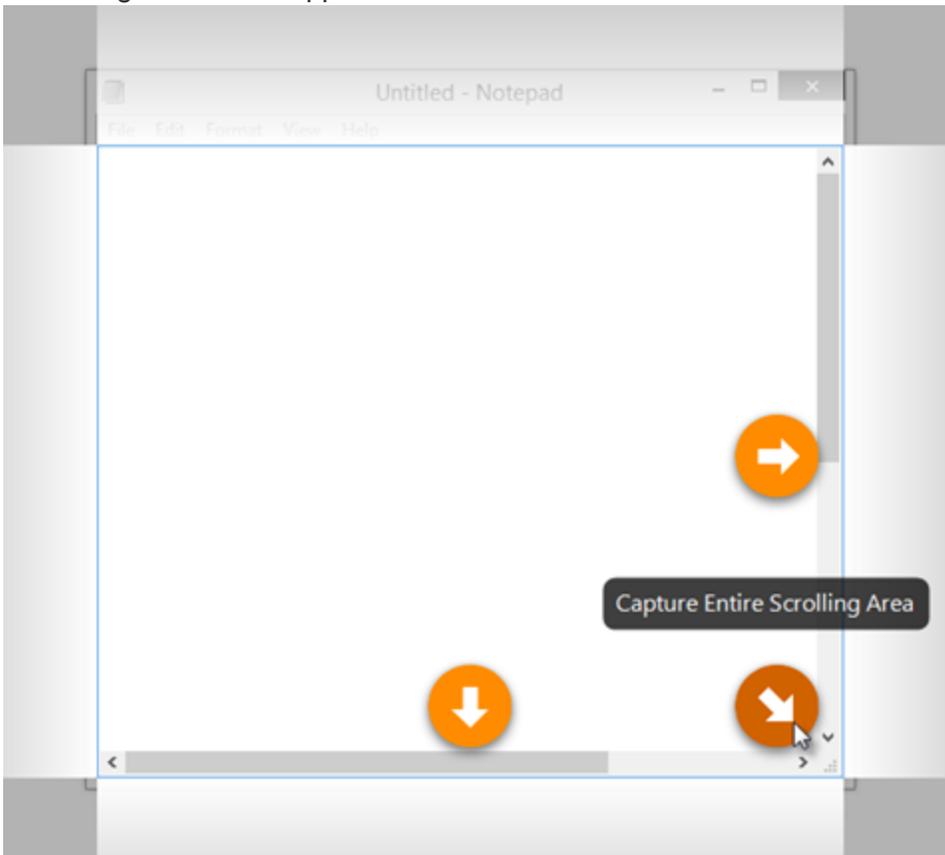

1. Open or set up what you want to capture.
2. In the Capture window, click the **All-in-One** tab.

3. Click the **Capture** button or press **Control-Shift-C**.

4. The orange crosshairs appear. Move the cursor over the window.

Click an arrow to take a capture of the horizontal scrolling area, vertical scrolling area, or the entire scrolling area.

If the scroll arrows do not appear, make sure Scrolling Capture is enabled in the [Capture Preferences](#).

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

Related Articles

[Panoramic Scrolling Capture](#)

[Capture an Entire Webpage](#)

Panoramic Scrolling Capture

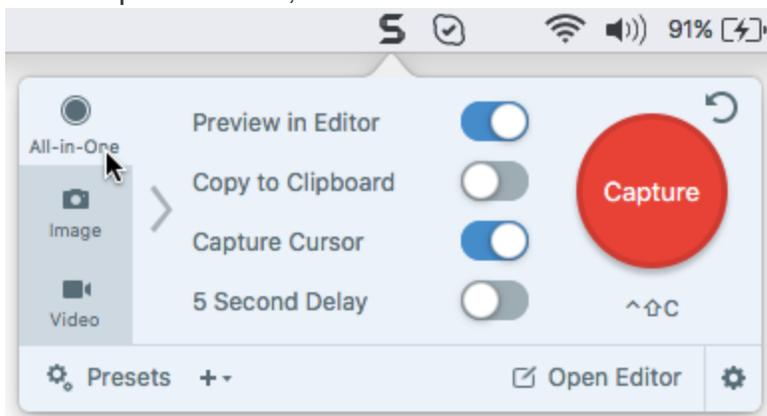

Panoramic Scrolling Capture captures a continuous area within a window by manually panning or scrolling the window's contents.

There are two ways to start a Panoramic Scrolling Capture:

- [Capture with All-in-One](#)
- [Capture with the Preset](#)

Capture with All-in-One

1. In the Capture window, select the **All-in-One** tab.

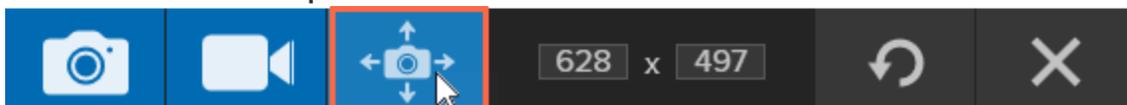

2. Click the **Capture** button or press **Control-Shift-C**.

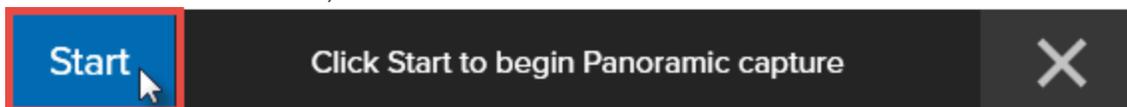

3. The orange crosshairs appear. Click and drag to select an area within a window on the screen. See [Selection Area Tips](#).

4. Click the **Panoramic Capture** button.

5. On the Panoramic toolbar, click the **Start** button.

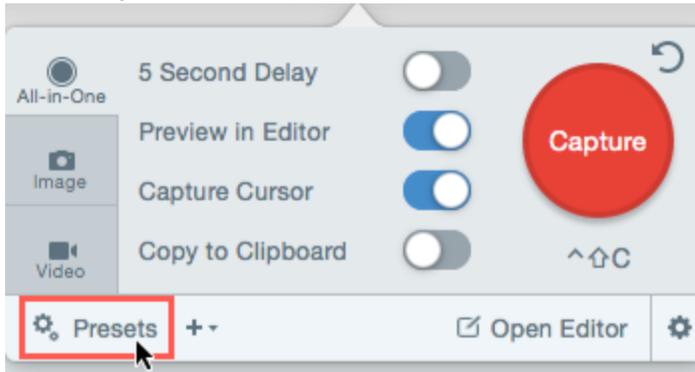

6. In the window, use the scrollbars or click and drag to pan the content in the window to capture. Snagit captures anything shown within the selected area. See [Scrolling and Panning Tips](#).

7. To stop a Panoramic Capture, click the **Stop** button on the Panoramic toolbar. If the toolbar is hidden, click the Capture window icon in the taskbar.

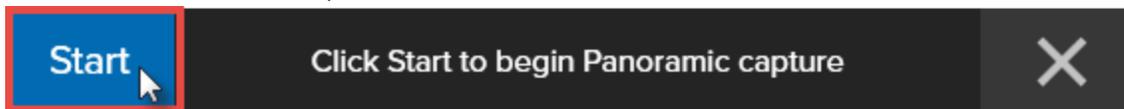

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

Capture with the Preset

1. In the Capture window, click the **Presets** button.

2. The list of presets expands. Click the **Panoramic Scrolling Capture** preset.
3. The crosshairs appear. Click and drag to select an area within a window on the screen. See [Selection Area Tips](#).
4. On the Panoramic toolbar, click the **Start** button.

5. In the window, use the scrollbars or click and drag to pan the content in the window to capture. Snagit captures anything shown within the selected area. See [Scrolling and Panning Tips](#).
6. To stop a Panoramic Capture, click the **Stop** button on the Panoramic toolbar. If the toolbar is hidden, click the Capture window icon in the taskbar.

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

Selection Area Tips

- Resize the web browser or application window to a larger size so it is easier to view the content as you scroll or pan during capture.
- Do not include the scroll bar in the selection.
- Consider excluding irrelevant content in the capture such as blank margins, online ads, etc.
- Disable floating toolbars before capture.

Scrolling and Panning Tips

- Scroll smoothly. Do not scroll to fast or slow.
- Scroll or pan one direction at a time. Try not to zigzag.

Image Tab Settings

The Image tab allows you to customize the image capture settings to meet your needs. Automatically add effects, share directly to a destination, add a time delay, and other customizations.

The Image tab settings include:

- [Basic Settings](#)
- [Selection Settings](#)
- [Effects Settings](#)
- [Share Settings](#)

To get started in capturing an image with the selected settings, see [Capture an Image](#) or [What Do You Want to Capture](#).

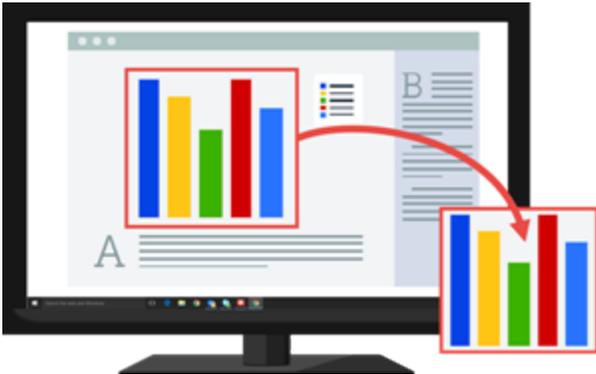

Basic Settings

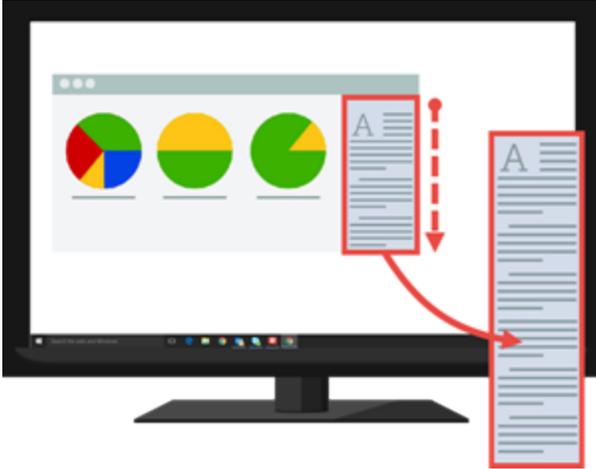

Option	Description
Copy to Clipboard	Copy the capture to the Clipboard for quick pasting into another program or location after capture.
Preview in Editor	Open the capture in Snagit Editor to preview, edit, and share the image. Disable this option to skip previewing and editing the capture in Snagit Editor. Select a Share option in the Capture window, to automatically share to your destination.
Capture Cursor	Include the cursor in the capture. For image captures, the cursor is captured as a vector image that can be moved, edited, or deleted from the image.

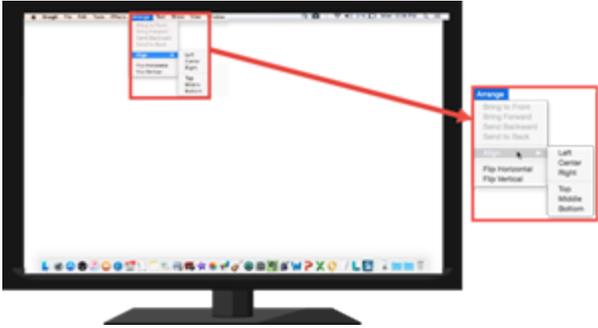

Option	Description
Capture Delay	<p>Delay the start of the capture to allow for additional setup time to open a menu or set up items on the screen. Select from the following Capture Delay options:</p> <ul style="list-style-type: none"> • Delay: Set a capture delay in seconds. See Set Up a Time-Delayed Capture.

Selection Settings

Selection defines the area or type of content to capture on the screen. Snagit provides selection options designed to capture difficult to capture items such as menus and content not visible in a window without using the scroll bars.

Option	Description
<p>Region</p> 	<p>Capture a portion of the screen.</p>
<p>Fullscreen</p>	<p>Capture an image of the entire screen.</p> <div style="border: 1px solid #ccc; padding: 10px; background-color: #f9f9f9;"> <p>If you have multiple monitors, the Fullscreen option only captures one monitor.</p> </div>
<p>Expose</p>	<p>Capture an open window, dialog, or area in an application on your screen.</p>

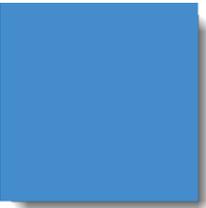

Option	Description
	
<p data-bbox="131 680 331 709">Scrolling Window</p> 	<p data-bbox="773 848 1463 940">Capture the entire contents of a web browser or application window including the content that extends beyond the visible area in the window.</p>
<p data-bbox="131 1159 256 1188">Panoramic</p> 	<p data-bbox="773 1383 1403 1446">Capture a continuous area within a window by manually panning or scrolling the window's contents.</p>
<p data-bbox="131 1719 196 1749">Menu</p>	<p data-bbox="773 1719 1230 1749">Capture a dropdown or cascading menu.</p>

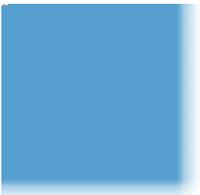

Option	Description
	
Webcam	Capture a still image from a built-in webcam or another camera device.
Webpage	An alternative method to scrolling capture to quickly capture an entire web page.

Effects Settings

Automatically apply effects to the image capture.

1. Select an option from the **Effects** dropdown.
2. Click the **Properties** button to set the effect properties.
3. To add another effect to the image capture, select the **Add another effect** option. Repeat steps 1 and 2.

Option	Description
Border 	Add an outline border around an image.
Shadow 	Add a shadow effect to a side or around the entire image.

Option	Description
<p data-bbox="118 233 191 260">Edges</p> 	<p data-bbox="613 342 1203 369">Add an edge effect to one or more sides of an image.</p>
<p data-bbox="118 525 256 552">Perspective</p> 	<p data-bbox="613 617 1438 678">Distorts an image to give the appearance of being viewed from a different angle.</p>
<p data-bbox="118 816 237 844">Reflection</p> 	<p data-bbox="613 945 1052 972">Add a mirror-like reflection to an image.</p>
<p data-bbox="118 1148 256 1176">Color Filters</p>	<p data-bbox="613 1148 1068 1176">Apply a filter effect over the entire image</p>
<p data-bbox="118 1218 175 1245">Fade</p> 	<p data-bbox="613 1329 1179 1356">Apply a gradual dimming to the edges of an image.</p>

Share Settings

Select an output to send the image to after capture.

1. Select an option from the **Share** dropdown.
2. To share to multiple destinations, select the **Add another destination** option.

If the **Preview in Editor** option is enabled, you must click the **Finish** button in Snagit Editor to send the

capture to the selected destination.

Snagit Outputs	Description
FTP	Send the capture to an FTP server using file transfer protocol.
Screencast.com	Upload the capture to TechSmith's hosting service which provides a URL or embed code for quick sharing.
Camtasia	Import image captures to use as assets in a video project.
Mail	Insert the capture into a new email message.
Messages	Insert the capture into a new message.
Google Drive	Upload the capture to Google Drive for image hosting.
Airdrop	Send the capture to another Apple device through AirDrop.
Twitter	Post a tweet to your Twitter account that includes a link to the capture.
TechSmith Relay	Upload an image to TechSmith Relay.
Dropbox	Upload the capture to Dropbox for image hosting.
Facebook	Post a capture onto your Facebook timeline.
Flickr	Upload an image capture onto Flickr.

Save Settings as a Preset

To save the capture settings for future use, select **Add Preset dropdown > New preset from current settings**.

[Capture Window Overview](#)

[Change the Global Capture Keyboard Shortcut](#)

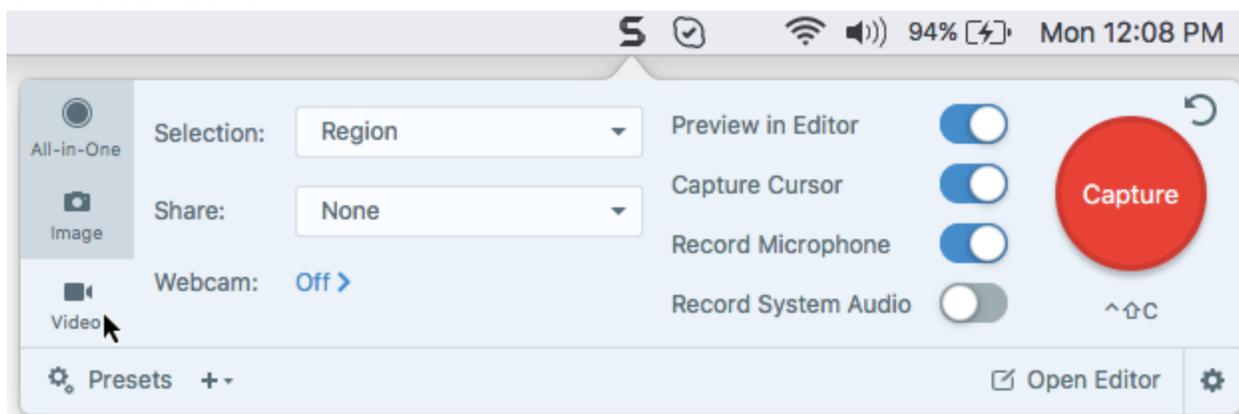

[Save Capture Settings with Presets](#)

[All-in-One Tab Settings](#)

[What Do You Want to Capture?](#)

[Record a Video](#)

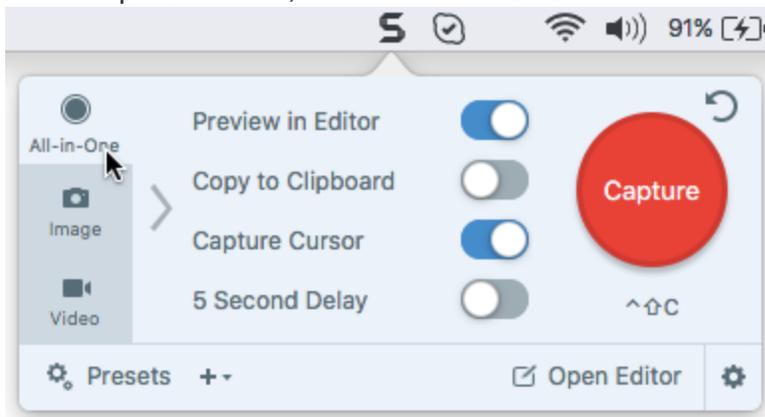

Record a Video

Record a video of the action on the screen as an MP4 video. You can choose to record microphone audio, system audio, and a webcam. Use Snagit videos to:

- Walk someone through a process or issue.
- Record a demonstration or a how-to video.
- Record a presentation switching between the presentation slides and video of the speaker.
- Send someone audio and visual feedback in a video.
- Record a small portion of an online video or animation.

Record a Video

1. In the Capture window, select the **All-in-One** tab.

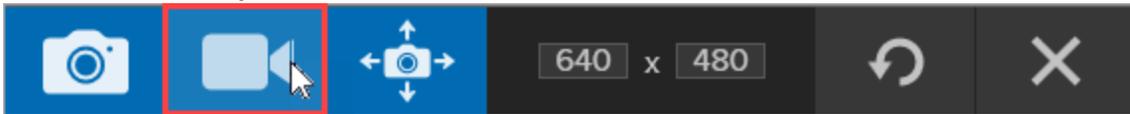

2. Click the **Capture** button or press **Control-Shift-C**.

3. The orange crosshairs appear. Click and drag to select the area to record on the screen or click the **Fullscreen** button to select the entire screen.
For tips, see [Select the Video Recording Area](#).
4. To edit the selected area, complete any of the following:
 - Drag the handles to adjust the selection.
 - To enter a specific size, type the dimensions in pixels into the **Width** and **Height** fields.
 - To move the selected area on the screen, click within the highlighted area and drag the selection to the desired location.

5. Click the **Video Capture** button.

6. The Video Recording toolbar appears.

The options on the toolbar can be toggled on or off during recording:

- **Webcam:** Record live video of the connected or built-in webcam. Screen video is not recorded when the webcam option is enabled.

- **System Audio:** Record the sound from your computer such as application alerts, audio playing from your speakers, etc.

- **Microphone Audio:** Record the audio from your computer's built-in microphone or from a connected USB microphone.

7. To begin recording, click the **Record** button.

8. To stop the recording, click the **Stop** button or press **Option-Shift-V**.

The capture opens in [Snagit Editor](#) where you can preview, edit, and share the capture.

TIP: Save a Preset

If you frequently use the same video dimensions or recording settings, save the settings as a preset for future use. See [Set Up a Custom Video Recording](#).

Related Articles

[Trim or Cut Out Unwanted Video Sections](#)

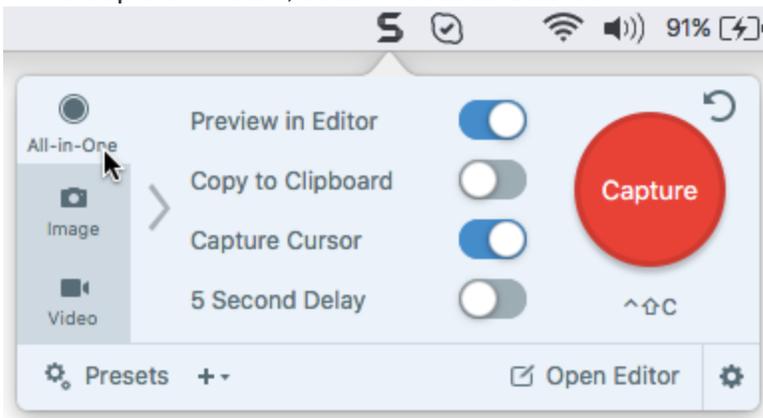

Select the Video Recording Area

To create quality [videos](#), you should consider the recording dimensions before starting the video recording. It is important to select the appropriate dimensions for where you plan to host or share the video with your audience. Snagit provides several ways to help you select the appropriate dimensions for your video recordings.

Select the Video Recording Area

Snagit offers the flexibility to record specific dimensions, a 4:3 or 16:9 aspect ratio, the entire screen, a region, or a window. Frame the screen content by selecting a recording area that only includes the relevant screen content.

1. In the Capture window, select the **All-in-One** tab.

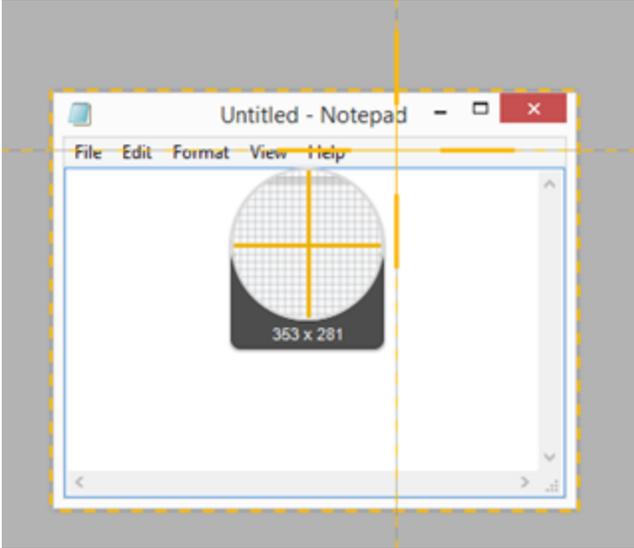

2. Click the **Capture** button or press **Control-Shift-C**.

3. The orange crosshairs appear. To select the area, complete one of the following:

Recording Selection	Steps to Complete
Fullscreen	Click the Fullscreen button. 
Window	1. Hover the cursor over the window to record.

Recording Selection	Steps to Complete
	 <p data-bbox="402 856 1138 890">2. An orange border appears around the window. Click to select.</p>
Region	<p data-bbox="375 940 899 974">Click and drag to select an area on the screen.</p> <div data-bbox="375 995 1503 1115" style="border: 1px solid #ccc; padding: 5px; background-color: #f9f9f9;"> <p data-bbox="440 1041 846 1075">Hold the Shift key to draw a square.</p> </div>
Custom Dimensions	<ol data-bbox="402 1163 1386 1247" style="list-style-type: none"> 1. Click and drag to select an area on the screen. 2. The toolbar appears. Enter the custom dimensions into the Width and Height fields. 

To learn more about setting up a video recording, see [Record a Video](#).

Select Standard Dimensions

Snagit's video guides show standard or recommended dimensions for common video sharing destinations such as YouTube, websites, and mobile devices.

If you plan to share your video to a location that requires specific video dimensions, it is recommended to record at these dimensions or at the same aspect ratio as the recommended dimensions.

1. When selecting an area to record, press **G** to turn the video selection guides on or off.
2. Click and drag to select the recording area. As you drag the cursor near one of the standard dimensions, the guide dimly appears.
3. Continue to drag the cursor until the selection border highlights to match the guide.

- [Combine](#) multiple captures.

You can customize the toolbar with the frequently used tools, effects, share options, and commands. See [Customize Snagit Editor Toolbar](#).

Common Image Editing Tasks

- [Make a Selection](#)
- [Cut, Copy, and Paste](#)
- [Fill an Area with a Specific Color](#)
- [Remove Unwanted Areas from an Image](#)
- [Resize an Image](#)
- [Rotate an Image](#)
- [Create Source Graphics for Future Editing](#)
- [Convert Images](#)
- [Add an Image Effect](#)

Tips for Working on the Canvas

- To edit moveable objects on the canvas at a later time, save images as a [SNAGPROJ file](#).
- Drag one of the handles on the edge of an image to create more working space on the canvas.
- The checkerboard pattern on the canvas represents transparent areas in an image. To keep transparency, save the image to a file format that supports transparency. See [Transparency Tips](#).

Arrange Objects

In Snagit Editor, you can edit any objects on the canvas that have not been flattened. Once an object has been flattened, it is a permanent part of the image and cannot be edited.

TIP: Save a SNAGPROJ file

Save your image as a SNAGPROJ file to edit objects, annotations, and text at a later time.

Resize Objects

1. Click to select an object on the canvas.
2. Drag a white handle in or out. To maintain the aspect ratio while resizing an object, hold the **Shift** key.

To resize the entire image, see [Resize an Image](#).

Move Objects

1. Click to select an object on the canvas.

SHIFT+click to select multiple objects.

2. Click within the object and drag it to a new position on the canvas.

Rotate Objects

1. Click to select an object on the canvas.
2. If an object can be rotated, a green handle appears at the top of the object. Drag the green handle around the object to rotate it.

To rotate the entire image, see [Rotate an Image](#).

Flip Objects

1. Click to select an object on the canvas.

SHIFT+click to select multiple objects.

2. Select Arrange > Flip Horizontal or Flip Vertical.

Align Objects

Use the align options to quickly align a group of objects together.

1. SHIFT+click to select multiple objects.
2. Right-click the group of objects and select Align > an alignment option.

Snagit aligns the edges of the objects based on the alignment option selected.

Change the Order of Objects

1. Click to select an object on the canvas.
2. Select Arrange > select an Order option.

Combine Images

In Snagit Editor, you can combine images or objects together on the canvas. Combine images to:

- Show a side-by-side comparison.
 - Enhance an image or graphic.
 - Build a collage or collection of images.
 - Piece together several images to show a process workflow or mockup.
1. Open the images to combine in the tray.
 - In Snagit Editor, select **File > Open**.
 - In the Library, double-click to open an image in the tray.
 - To take a new image capture, see [Capture an Image](#).
 2. Click to select the main image in the tray.
 3. To add an image into the main image, drag the image to add from the tray onto the canvas.
 4. The image is added as an editable object. After adding the image, you can:
 - Click and drag the image to change its position.
 - Drag a white handle in or out to resize the pasted image.
 - Right-click on the pasted image and select Flatten to make the pasted image a permanent part of the main image.

Cut, Copy, and Paste

Cut, copy, and paste options provide the flexibility to remove, duplicate, or move items in an image.

Copy Entire Canvas to the Clipboard

1. In Snagit Editor, click to select an image in the tray.
2. Click the **Copy All** button.

Copy a Selection to the Clipboard

1. In Snagit Editor, click the **Selection** tool.

2. Click and drag to select an area on the canvas.
3. Select **Edit > Copy** or press **Command-C**.

Cut Out Part of an Image

1. In Snagit Editor, click the **Selection** tool.

2. Click and drag to select an area on the canvas.
3. Select **Edit > Cut** or press **Command-X**.

Cut an Object

1. Click to select an object on the canvas. Command-click to select multiple objects.
2. Select **Edit > Cut** or press **Command-X**.

Cut all Objects

1. Select **Edit > Select All**.
2. Select **Edit > Cut** or press **Command-X**.

Paste onto the Canvas

After copying (Command-C) or cutting (Command-X) an object or selection from the canvas, select **Edit > Paste** or press **Command-V**.

Remove Unwanted Areas from an Image

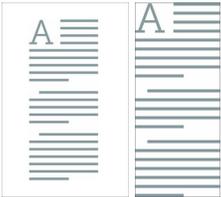

Show only the relevant content in an image to maintain your viewer's focus. Snagit offers several ways to remove areas from an image capture:

- [Manually Trim an Image](#)
- [Auto Trim an Image](#)
- [Crop an Image](#)
- [Cut Out a Section](#)

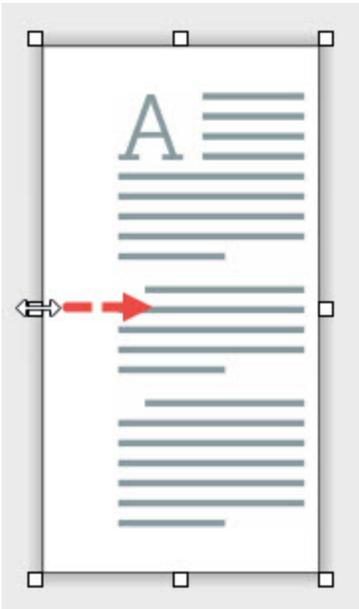

Trim an Image

Trim an image to remove the extra or unwanted area around an image.

Manual Trim

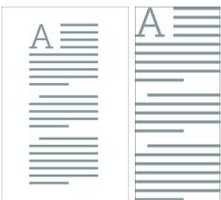

On the canvas, drag one of the white handles on the edge of the canvas to trim the top, bottom, or side of an image.

Auto Trim

To remove extra canvas space, select **Edit > Trim**.

The area removed from Auto Trim is based on the amount of solid color or transparency around the edges of the canvas.

Crop an Image

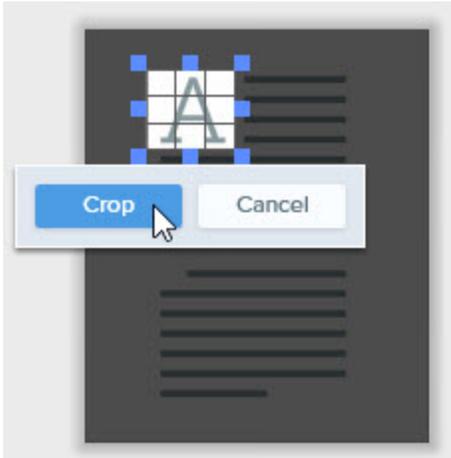

Manually select the area to remove around an image.

1. In Snagit Editor, click to select the **Crop** tool.

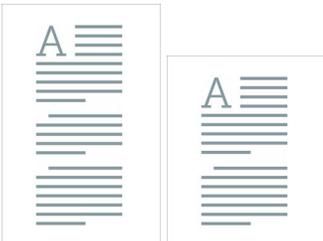

2. Blue handles and grid lines appear over the image. Drag a blue handle in to crop one side of the image.
3. Click the **Crop** button to save the changes.

Cut Out a Section

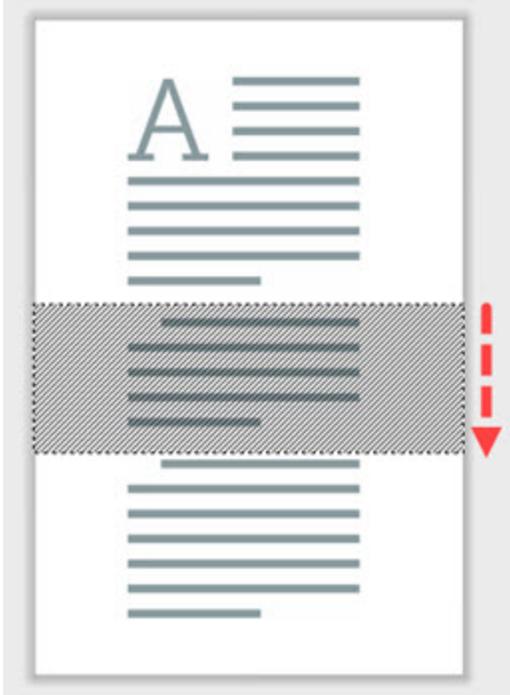

Delete a vertical or horizontal section from an image and join the two pieces together.

1. In Snagit Editor, click to select the **Cut Out** tool.

2. The Quick Styles open. Click to select a style.
3. A line appears on the canvas. Click and drag on the canvas to select the area to remove.

[Selection](#)

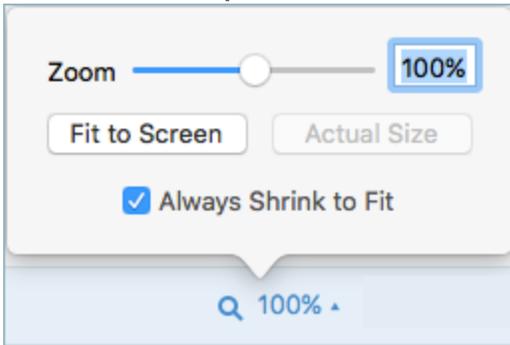

Zoom In or Zoom Out

Use the Zoom controls to preview an image.

The zoom level does not change the final size of the image. It only applies to the image preview in Snagit Editor and the thumbnail size in the library. See [Resize an Image](#).

Change the View Percentage

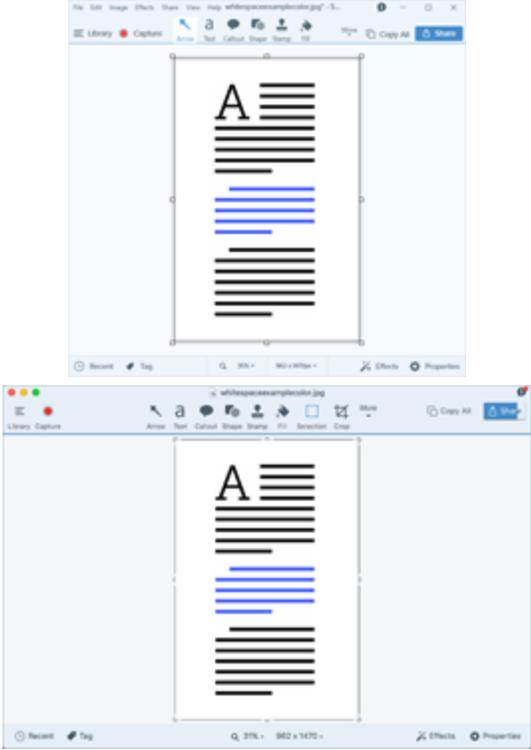

1. Click the **Zoom Options** button above the Recent Captures Tray.

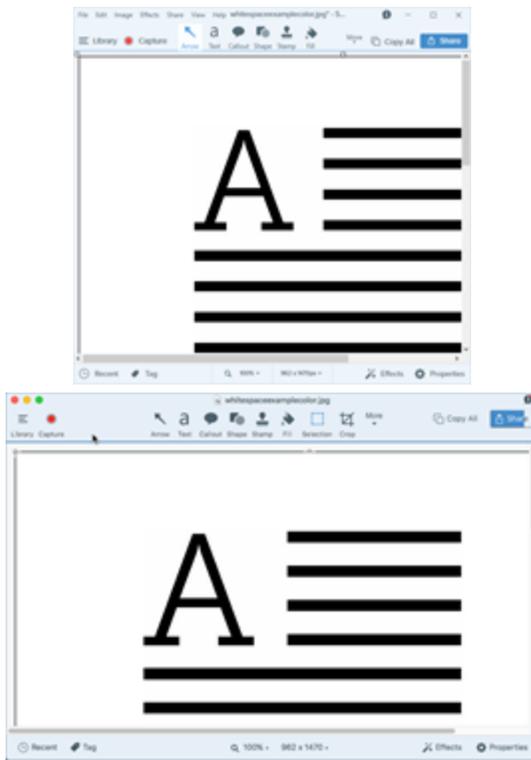

2. Drag the **Zoom** slider or enter a percentage into the field.
3. To reset the preview to the image's current size, click the **Actual Size** button.

Set the Zoom Preferences

The following options control the display of the capture on the canvas.

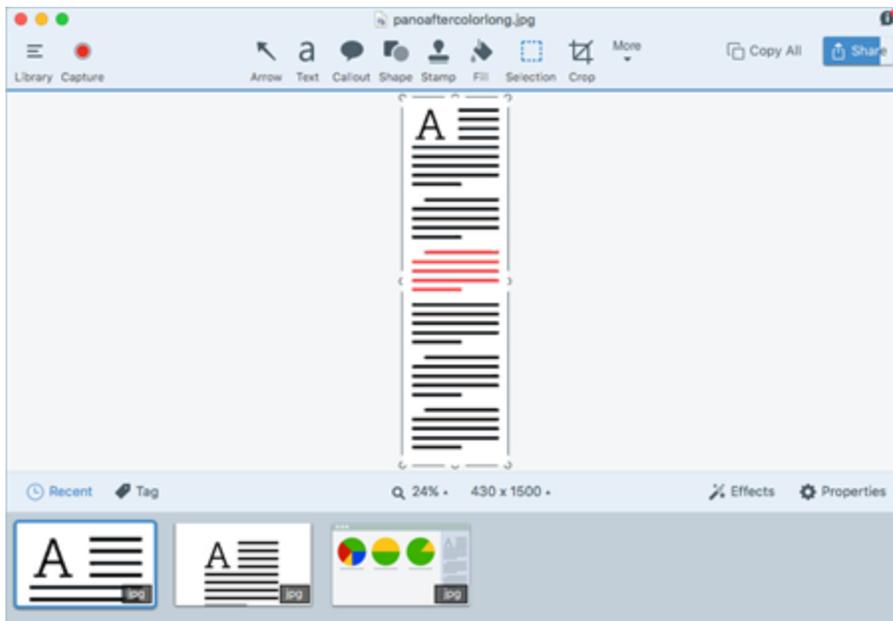

Example	View Option
	<p>Fit to Screen Display the selected capture to fit the canvas. This option sets the Zoom level based on Snagit Editor's window size.</p>

**Actual Size**

Display the selected capture at its actual dimensions. This option sets the Zoom level to 100%.

**Always Shrink to Fit**

Change the Zoom level to fit the entire capture on the canvas for all open captures.

Related Articles

Create Source Graphics for Future Editing

The SNAGPROJ file format saves the current state of an image and allows for editing of any vector-based objects on the canvas such as text, callouts, stamps, shapes, and pasted images. Use this file format to incorporate feedback, make edits or revisions, and update the image at any time.

The SNAGPROJ file format can only be opened in Snagit on Mac.

Save an Image as a SNAGPROJ File

1. In Snagit Editor, click to select the image in the tray.
2. Select **File > Save As**.
3. Select **SNAGPROJ - Snagit Project File Type** from the **Format** dropdown.
4. Click **Save**.

About Vector Graphics

If you save an image containing vector objects to another file format, the objects flatten to become a permanent part of the image.

Flatten Objects on the Canvas

- Right-click the object on the canvas and select **Flatten** or press **Shift-Command-T**.
- Right-click on an object on the canvas and select **Flatten All** or press **Control-Shift-T**.

Add Tags to Organize Captures

Add tags to captures to help group or find captures easily at a later time.

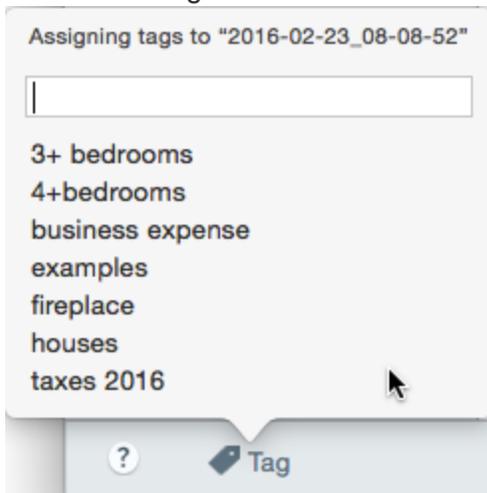

Tags are only visible in Snagit.

Apply a Tag

1. In Snagit Editor, select a capture in the [tray](#) or in the [library](#).

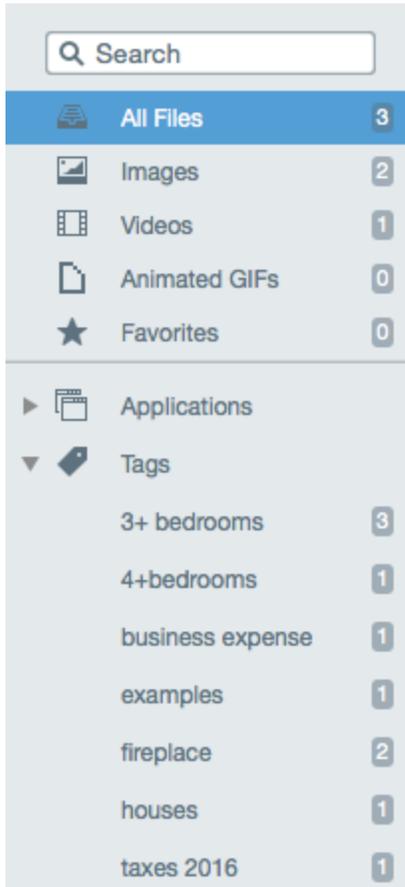

Command-click to select multiple captures.

2. Click the **Tag** button.
3. Enter a new tag or click to select an existing tag from the list.

View Tags

Snagit automatically saves your capture history to the [library](#). In the Search pane, click the **Tags** category to view a list of all the tags applied to captures.

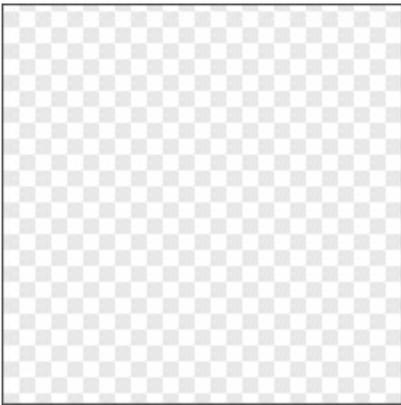

Related Articles

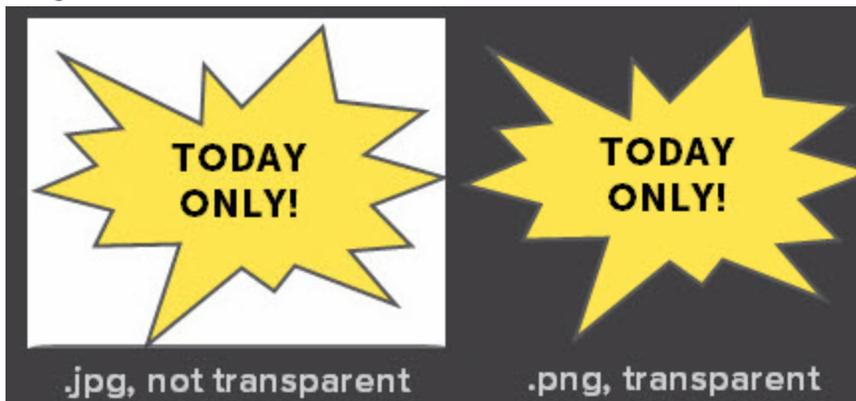

[View the Capture History \(Library\)](#)

Transparency Tips

Transparency is represented by a checkerboard pattern on the canvas.

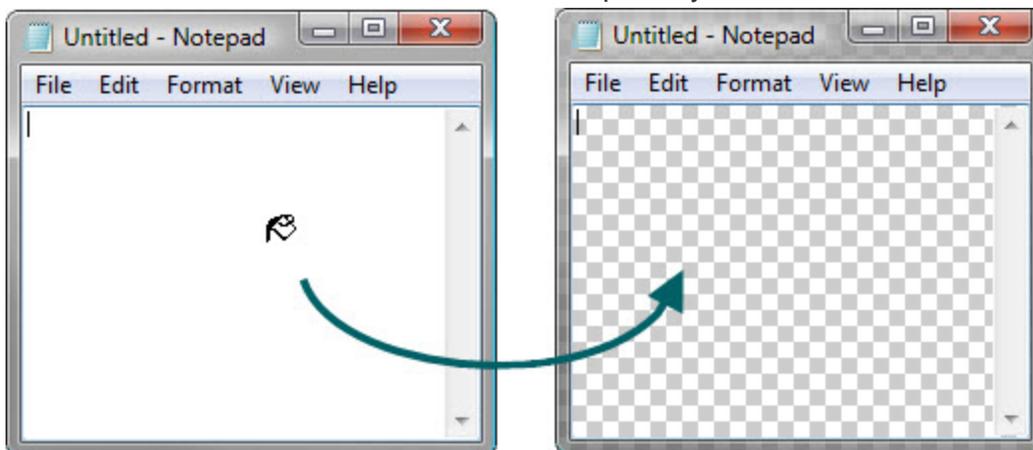

When you add a transparent image, the background behind the image shows through the transparent areas in an image.

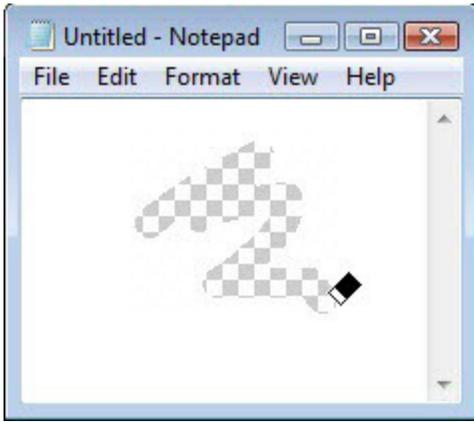

Fill or Erase an Area with Transparency

The **Fill** tool can be used to fill an area with transparency.

The **Eraser** tool can be used to remove a section of the image, leaving behind only the transparent canvas.

Save a Transparent Image

To maintain transparency, save the image to a file format that supports transparency: CUR, GIF, ICO, PNG, TIF, or SNAGPROJ.

Transparent areas in an image show the background or any other colors or objects the image is placed over.

Import an Image or Video from a Mobile Device

TechSmith Fuse is a mobile app that allows you to send images and videos from your mobile device directly to Snagit. You can capture, collaborate, and access your content - wherever you are.

Fuse is available from the [Google Play](#), [Windows Store](#), or the [App Store](#) and supported on mobile devices running the following operating systems:

- iOS version 9 and later (phones and tablets)
- Android version 4.0 and later
- Windows 8.1 and later or Windows RT

Import Images or Videos from a Mobile Device

1. Install TechSmith Fuse from [Google Play](#), [Windows Store](#), or the [App Store](#) onto your mobile device.
2. In Snagit Editor, select **File > Connect Mobile Device**. The Connect Mobile Device dialog opens.
3. Connect your computer and mobile device to the same network. See [Troubleshooting TechSmith Fuse](#).
4. Open TechSmith Fuse on your mobile device.
5. Select the media to send:
 - Tap **Library** to import from your device or to select existing media.
 - Tap **Video** to record a video.
 - Tap **Photo** to take a photo.
6. Tap **Share** and select **Snagit**.
If the Snagit icon does not appear, tap **More**.
7. Tap **Connect to Snagit**.

8. The Scanner appears. Point your camera at the QR code in the Connect Mobile Device dialog. See [Tips for scanning the QR code](#).

The image or video is sent to the tray in Snagit Editor.

Tips for scanning the QR code

Follow these tips for scanning the QR code using TechSmith Fuse on your mobile device:

- Make sure the device is on and connected to the same network as the computer running Snagit.
- Aim the camera on the device at the QR code on the computer screen.
- Position the camera so that the QR code is centered within the corners of the Scanner screen in TechSmith Fuse on your mobile device or tablet.

About Connecting TechSmith Fuse and Snagit

- Opening the Connect Mobile Device dialog turns on the **Mobile Sharing** option.
- You must scan the QR code in Snagit to establish a connection between the mobile device and Snagit for sending the mobile files.
- Your mobile device and the computer running Snagit must be connected to the same network.
- You must have Snagit open on your computer.

About Mobile Sharing with TechSmith Fuse

Mobile Sharing allows Snagit to receive files from TechSmith Fuse. It is turned off by default and will only turn on if you:

- Connect TechSmith Fuse to Snagit from a mobile device.
- Select Snagit Editor > File > Editor Options > Advanced tab > Enable sharing to Snagit.

Once Mobile Sharing is turned on, you can connect Fuse to Snagit. Mobile Sharing continues to run until it is turned off.

Snagit opens a port on your computer to establish a secure connection between your mobile device and Snagit. If you have security concerns about the connection remaining open after you have transferred the files from Fuse, you can turn off Mobile Sharing.

Turn Mobile Sharing Off:

Select Snagit Editor > File > Editor Options > Advanced tab > click the Enable sharing to Snagit option. Mobile Sharing may also turn off if interrupted. This can happen if:

- Your network/router becomes disconnected or needs to be reset.
- Your computer automatically generates new IP addresses.
- You change network providers.

Related Articles

[Troubleshooting TechSmith Fuse in Snagit](#)

Troubleshooting TechSmith Fuse

If TechSmith Fuse cannot connect or send files to Snagit, see the following:

- [Unable to send files from TechSmith Fuse to Snagit](#)
- [Unable to scan QR code](#)
- [QR code is missing](#)

For additional help, see the support article on the TechSmith website.

Unable to send files from TechSmith Fuse to Snagit

If you are unable to send files from TechSmith Fuse to Snagit Editor, check the following:

- Make sure Snagit is open on the computer when sending files from TechSmith Fuse to Snagit.
- Select Snagit Editor > Snagit > Preferences > Advanced tab to make sure the Mobile Sharing option is turned on.
- You must scan the QR code in Snagit to establish a connection between the mobile device and Snagit for sending the mobile files. See [Import an Image or Video from a Mobile Device](#).
- Your mobile device and the computer running Snagit must be connected to the same network.

- Reset the router or wireless network.
- Check your network or firewall settings.

Unable to scan QR code

If TechSmith Fuse cannot scan the QR code located in the Connect Mobile Device dialog (Snagit Editor > File > Connect Mobile Device), check the following:

- Make sure the device is connected to the same Wi-Fi network as the computer running Snagit.
- Aim the camera on the device at the QR code on the computer screen.
- Position the camera so that the QR code is centered within the corners of the Scanner screen in TechSmith Fuse on your mobile device or tablet.

QR code is missing

In Snagit, an error message appears in the Connect Mobile Device dialog (Snagit Editor > File > Connect Mobile Device) if a QR code cannot be generated.

A QR code may not be generated if:

- The network/router is disconnected or needs to be reset.
- The specified port is already in use.

If a QR code is not generated:

- Check your network or firewall settings.
- Connect your mobile device and computer to another network.

Import from Google Drive

Use Google Drive to store images or videos so they are accessible on any device at anytime.

1. In Snagit Editor, select **File > Import/Export from Cloud > Import from Google Drive**.
2. If you have not previously logged into your Google account, the Connect with Google Drive dialog appears. Enter your email and password and click **Sign in**.
3. Click **Allow** in the Connect with Google Drive dialog.
4. The Import from Google Drive dialog appears. Click to select the image or video to import into Snagit. Command-click to import multiple images or videos.
5. Click the **Import** button.

The images or videos open in the tray in Snagit Editor.

Import from My Places

Import your files from a shortcut in My Places, such as OneDrive for Business.

1. In Snagit Editor, select **File > Import from My Places**. You may be prompted to sign in to your TechSmith Account.
2. Select a location from My Places.

If you do not have any locations in My Places or to import from a new location, see [Add or Remove a Place](#).

3. Browse to select the file to import.
4. Click **Import**.

The file opens in the tray and on the canvas in Snagit Editor.

Editing a theme overwrites your existing Quick Styles in the theme. To maintain your existing styles, you can edit the Quick Styles individually. See [Manually Add or Edit Quick Styles](#).

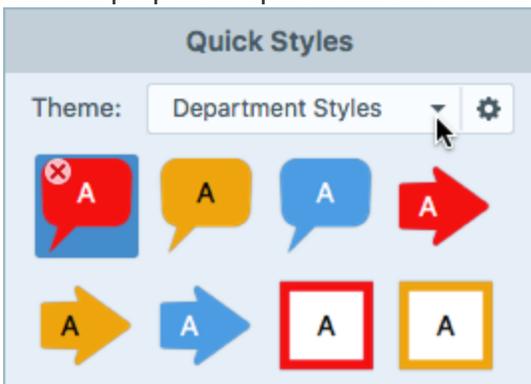

Manually Add or Edit Quick Styles

When creating a new theme, Snagit automatically generates Quick Styles based on the selected colors. You can customize these Quick Styles for each tool to fit your needs.

1. In Snagit Editor, click to select a tool.

2. The tool properties open. Click the **Theme** dropdown and select a theme from the list.

3. In the Quick Styles, click to select the style to edit.
4. Edit the tool properties. As you edit the properties, a new Quick Style appears at the bottom of the existing

styles.

5. Click the **+** icon to save the new Quick Style.

Delete Quick Styles

Right-click on a Quick Style and select **Delete Quick Style**.

The Quick Style is permanently deleted from the selected theme.

Selection

The Selection tool provides options for selecting parts of an image. After making a selection on the canvas, you can cut, copy, move, delete, edit, or apply effects to the selection.

Selection Overview

To open the selection options, click the **Selection** tool in the Snagit Editor toolbar.

The tool properties appear on the right-side of Snagit Editor. Before selecting an area on the canvas, adjust the following properties:

1 Selection Shape
Choose a selection shape: Square, Ellipse, Polygon, or Freehand.

2 Snap to Object
Turn on to snap to text or irregular-shaped objects within the selected area. Drag the slider to adjust the object selected.

3 Background Fill
Choose an option to fill the area when the selection is moved or deleted. Auto-Fill automatically fills the area based on the content surrounding the selection.

4 Optimize For
Speed is best for solid-colored content or if the fill details are not important. Select Photo Quality for advanced customization and higher quality fill.

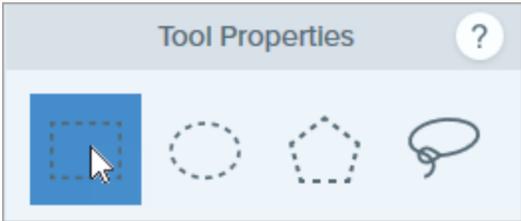

What Do You Want to Select?

Translate Text and Callouts

The Translate option helps you to quickly create images for multiple languages. Snagit extracts the source text from [text annotations](#) and [callouts](#) into a .xliff file to send to your translator. You can import the file into Snagit to automatically generate translated images.

Send Text for Translation

Complete the following steps to extract text from [text annotations](#) and [callouts](#) to send for translation:

1. In the library, select .snagproj files with text annotations or callouts.
2. Click the **Translate** button to extract the text for translation.

3. In the **Extract As** field, enter a project name.

Snagit tags the source files with a project name and a language tag so you can quickly locate the images in the library.

4. Select a location to save the .xliff file.
5. Click the **Extract** button.
6. Send the .xliff file to your internal translator or localization vendor to add the target language translations.

Import Translations

After the text translations are added to the .xliff file, you can import the file into Snagit Editor to automatically generate the translated images.

1. In Snagit Editor, select **File > Import/Export > Import Translation**.
2. Select the .xliff file that contains the translations and click **Open**.
3. Select the translated language from the dropdown and click **OK**.
4. Snagit automatically generates the localized images based on the translations in the .xliff file. Snagit tags the translated images with a project name and a language tag so you can quickly locate the graphics in the library.
5. The **Review Imported Translations** dialog appears if there are any images or issues for you to review.

Click a message in the list to open the file to review on the canvas. See [Review Translated Images](#).

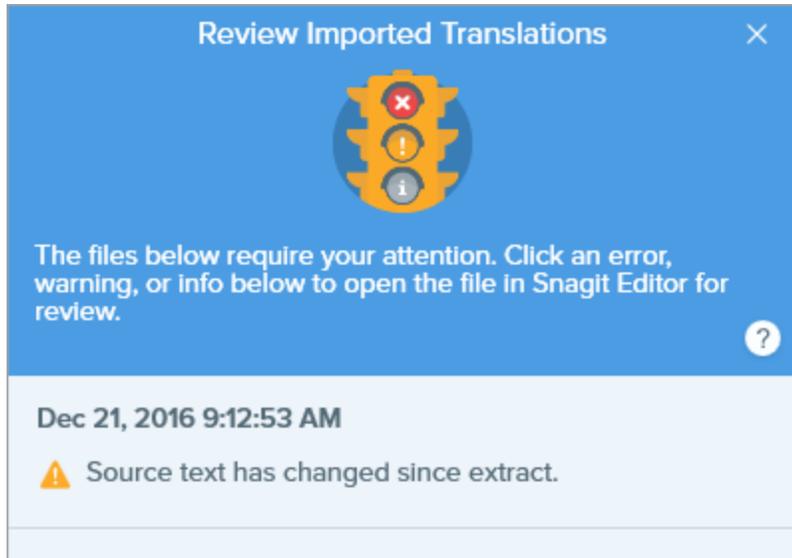

Related Articles

[Review Translated Images](#)

Create an Animated GIF Video

1. Open a [video capture](#) or click to select a video from the [Recent Captures Tray](#).
2. To select the portion of the video to use for the Animated GIF, drag the start or end handle on the timeline.

TIP: Keep it Short!

It is recommended to select a segment less than 30 seconds.

3. Drag the playhead to a location within the selection. Click the **Play** button to preview the selection.
4. Continue to make edits using start and end handles until you are satisfied with the selection.
5. Click the **Create Animated GIF** button.
6. The Create GIF dialog appears. Select an **Optimize For** option:
 - **Screen Video (Default)**: Select this option if the video contains screen recording.
 - **High Motion Video**: Select this option if the video contains real world video or games.
 - **Custom**: Select this option if you want to customize the settings. See [Custom GIF Settings](#).
7. Click the **Create** button.

Snagit produces the Animated GIF file and adds it to the beginning of the Recent Captures Tray.

Custom GIF Settings

Setting	Description
Frame Rate	Number of frames per second. A higher frame rate produces smoother video playback and can result in larger file sizes.

Setting	Description
Dimensions (unit)	Select the unit to display the width and height dimensions.
Dimensions (Width and Height)	Enter the width and height dimensions for the Animated GIF file. Decreasing the dimensions can result in lower file sizes for the Animated GIF.
Lock Aspect Ratio	It is recommended to lock the aspect ratio, the ratio of the width to the height of a video. Unlocking the aspect ratio may result in skewed or blurry video content.
Enable Dithering	Enable Dithering to prevent color banding and to produce smoother video content. Dithering can result in larger file sizes.
Looping	If looping is enabled, the Animated GIF plays back on a continuous loop. If looping is disabled, the Animated GIF plays until the end of the video.
Dynamic Colors	This option is recommended for most videos. Enabling this option can result in increased file sizes. If you need to decrease the file size, you may consider disabling this option for videos with low color variation.
Fade to Black	Add a transition to the end of the Animated GIF to fade the last frame to black.

Share Overview

Quickly share your images or videos using the Snagit outputs.

1. In Snagit Editor, click to select a capture in the [tray](#).
2. Click the **Share** button and select an output.

Snagit disables the outputs that do not support the file format of the selected capture in the tray.

Default Outputs

Output	Image	Video
File Save an image or video capture to a file location.	✓	✓
Email Insert the image capture into a new email message.	✓	
FTP Send the capture to an FTP server using file transfer protocol.	✓	✓
Microsoft Word Insert the image capture into a Microsoft Word document.	✓	
Microsoft PowerPoint Insert the image capture into a Microsoft PowerPoint presentation slide.	✓	
Microsoft Excel Insert the image capture into a Microsoft Excel workbook.	✓	
Screencast.com Upload the capture to TechSmith's hosting service. Screencast.com provides a URL or embed code for quick sharing.	✓	✓
Camtasia Import image captures to use as assets in a video project. Import video captures to edit or use as source clips in a project.	✓	✓
TechSmith Relay Upload an image or video to TechSmith Relay.	✓	✓
YouTube Upload the video capture to your YouTube account.		✓
Google Drive Upload the capture to Google Drive for image or video hosting. A link to the capture is copied to the Clipboard.	✓	✓
Dropbox Upload the capture to Dropbox for image or video hosting. A link to the capture is copied to the	✓	✓

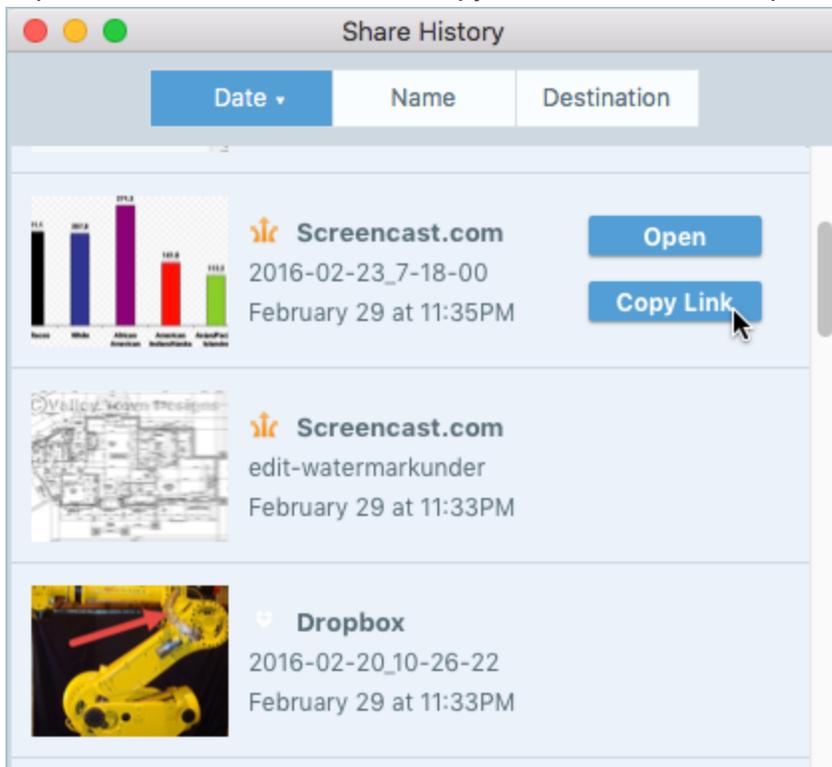

Output	Image	Video
Clipboard.		
My Places: OneDrive for Business Upload the capture to Microsoft OneDrive for Business to access it at any time across computers or devices.	✓	✓

Download More Outputs

TechSmith offers additional outputs you can download online. To download additional outputs, select **Share > More Snagit Outputs**.

Share History

Snagit remembers your captures shared to web-based destinations. Open the share history to quickly open the capture in its shared location or to copy the link to share the capture again.

To open your share history in Snagit Editor, click the **Share button > Share History**.

Open a Shared Capture

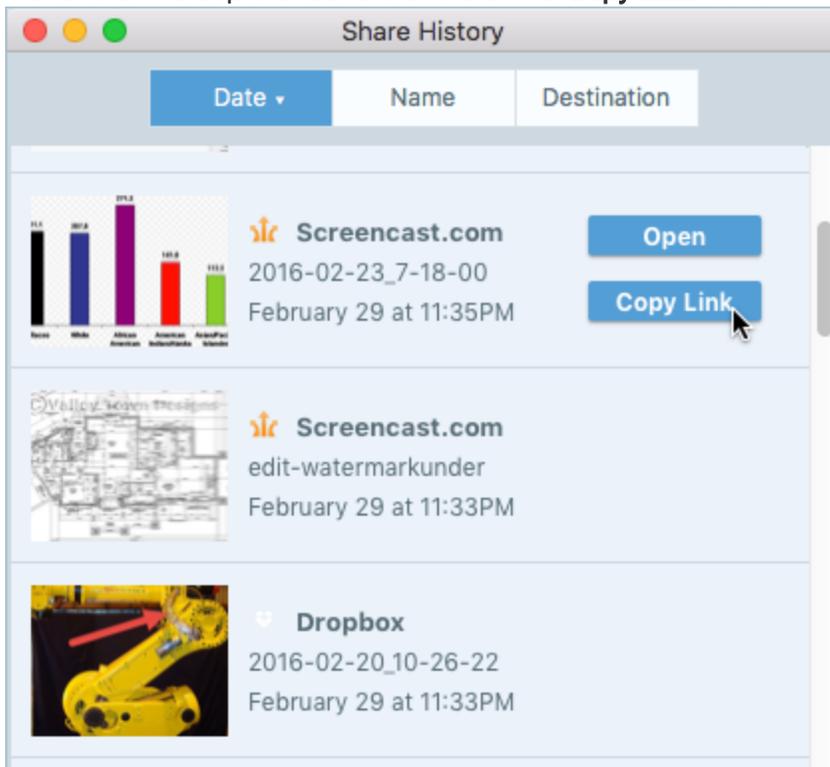

1. In Snagit Editor, click the **Share** button > **Share History**.
2. Hover over the capture to open and click the **Open Link** button.

Snagit opens the capture in its shared location in a web browser.

Reshare the Capture Link

Snagit it makes it easy to find and reshare captures at any time.

1. In Snagit Editor, click the **Share** button > **Share History**.
2. Hover over the capture to share and click the **Copy Link** button.

The link is copied to the Clipboard. To share the link, paste the link (Command-V) into the desired location.

Manage Snagit Outputs

Quickly share your images or videos using the Snagit outputs. The Snagit outputs appear in Share menu in Snagit Editor.

Download Additional Outputs

TechSmith offers additional outputs you can download online.

In Snagit Editor, select **Share > More Snagit Outputs**.

Add a New Output

You can customize the following items for the output:

- Save or change your account settings.
 - Set up multiple accounts for the same output, such as a business account and a personal account.
 - Create a custom name for an output.
1. Select **Snagit > Preferences > Output tab**.
 2. Click the **Add** button and select an output from the list.

3. Enter an Output Name.

If you set up multiple accounts for the same output, make sure to enter a unique name for each output. For example, "Twitter-Work" and "Twitter-Personal."

4. Customize the output settings.
5. Close the Preferences dialog.

Remove an Output

1. In Snagit Editor, select **Snagit > Preferences > Outputs tab**.
2. Select the output to remove and click the **Remove** button.

FTP

Send a capture to a FTP (File Transfer Protocol) server. Use FTP to transfer files to an outside network using a secure connection.

1. In Snagit Editor, click to select an image or video in the [Recent Captures Tray](#).
2. Select **Share > FTP**.
3. The Send with FTP dialog appears. Select the desired [FTP options](#) and click **OK**.

FTP Options

Option	Description
Server	Enter the IP address or DNS name of the target FTP server.
Port	Enter the port number (usually 21 for FTP).
Directory	Enter the directory path to the server.
Server authentication	Enter the Username and Password into the fields for server authentication.

Troubleshooting Snagit Helper Application

To help Snagit run properly, you may need to manually quit some Snagit applications.

1. Select Applications > Utilities > Activity Monitor.
2. Type "Snagit" into the Filter field in the upper-right corner of the Activity Monitor.
3. A list of any Snagit helper applications appears. Select an application from the list and click the **Quit Process** button.
4. Click **Force Quit**.
5. Repeat steps 3 and 4 for the remaining Snagit applications.
6. Relaunch Snagit.

General Preferences

To open the Snagit Preferences, select Snagit > Preferences > General tab.

Option	Description
Always keep Snagit running in the background	Keep Snagit running in the background to start a capture at anytime.
Snagit Shows	Choose the display for the capture options. Capture window is the default display. <ul style="list-style-type: none">• Capture Window: Displays the capture options from a window in the menu bar. The Capture window provides options for both quick and customized capture.• OneClick Tab: Displays the quick capture options as a tab on the upper-right side of the screen. The quick capture options display when you hover the cursor over the blur bar.• Capture Window & OneClick Tab: Displays the capture options in the menu bar and as a tab on the side of the screen.
Editor color theme	Choose between the two Snagit interface color themes: Light or Dark.
Show TechSmith notification feed	Show Snagit news, updates, and tips in the upper-right corner of Snagit Editor.
Send anonymous usage information	Send anonymous data on Snagit usage to help TechSmith improve future versions.
Automatically check for updates	Automatically check or download the latest version of Snagit when connected to the Internet.

Capture Preferences

To open the Snagit Preferences, select Snagit > Preferences > Capture tab.

Option	Description
Hide Snagit when capturing	Minimize Snagit during capture.
Show video countdown	Displays a three second countdown before starting the video recording.
Show quick controls in fullscreen recordings	Displays the Webcam button and Pause button in the bottom right corner of the screen during a fullscreen video recording.
Scrolling capture	This option only appears when Snagit's scrolling capture is disabled. Click the Enable button to install additional options to improve Snagit's scrolling capture capabilities.
Downsample Retina video recordings	Scales down Retina video recordings. It is recommended to enable this option. If video quality is a concern, you may want to consider disabling this option. When disabled, the text and graphics appear crisper, but the video may result in larger file sizes and dimensions.
Automatically start video recording	Automatically start the video recording after selecting the video recording area. By default, this option is disabled. You must click the Record button to start the recording.
System Audio Component	The TechSmith Audio Capture Component allows you to record system audio (the sound from your computer speakers) during a video capture.
Camera	Select a built-in or connected camera device for recording camera video.
Microphone	Select a built-in or connected audio device for recording microphone audio.
Input Level	Measures the audio level for the selected microphone audio device.
