# Capture a Scrolling Area

Snagit can capture the entire contents of a web browser or application window including the content that extends beyond the visible area in the window.

There are two ways to capture a scrolling area:

- **Scrolling arrows:** Automatically scroll a window horizontally, vertically, or in both directions to capture the entire contents of the window or web browser.

4. The orange crosshairs appear. Move the cursor over the window.

Click an arrow to take a capture of the horizontal scrolling area, vertical scrolling area, or the entire scrolling area.

If the scroll arrows do not appear, try [Panoramic Scrolling Capture](#) or make sure Scrolling Capture is enabled on Snagit Mac by selecting **Snagit > Snagit Preferences > Capture tab > Capture Permissions > Fix Capture Permissions**.

- Disable floating toolbars before capture.

## Scrolling and Panning Tips

## Recording Dimensions (Resolution)

To create quality videos, you should consider the recording dimensions before starting the video recording. It is important to select the appropriate dimensions for where you plan to share the video with your audience. Snagit provides several ways to help you select the appropriate dimensions for your video recordings.

### Select the Video Recording Area

Snagit offers the flexibility to record custom dimensions, a 4:3 or 16:9 aspect ratio, the entire screen, a region, or a window. Frame the screen content by selecting a recording area that only includes the relevant screen content.

Selection	Description
Fullscreen	<p>Click the <b>Fullscreen</b> button.</p> 
Window	<ol style="list-style-type: none"> <li>1. Hover the cursor over the window to record.</li> </ol>

Selection	Description
	 <p>2. An orange border appears around the window. Click to select.</p>
Region	<p>Click and drag to select an area on the screen.</p> <p>Hold Control and drag to lock the selection to a 16:9 aspect ratio or hold Shift and drag to lock to a 4:3 aspect ratio.</p>
Custom Dimensions	<p>1. Click and drag to select an area on the screen.</p> <p>2. The toolbar appears. Enter the custom dimensions into the <b>Width</b> and <b>Height</b> fields.</p> 

## Select Standard Dimensions

Snagit's video guides show standard or recommended dimensions (up to 1920x1080) for common video sharing destinations such as YouTube, websites, and mobile devices. Available video guides are:

- 1080p: 1920x1080
- 720p: 1280x720
- 640x480
- 320x240

If you plan to share your video to a location that requires specific video dimensions, it is recommended to record at these dimensions or at the same aspect ratio as the recommended dimensions.

1. When selecting an area to record, press **G** to turn the video selection guides on or off.
2. Click and drag to select the recording area. As you drag the cursor near one of the standard dimensions, the guide dimly appears.
3. Continue to drag the cursor until the selection border highlights to match the guide.

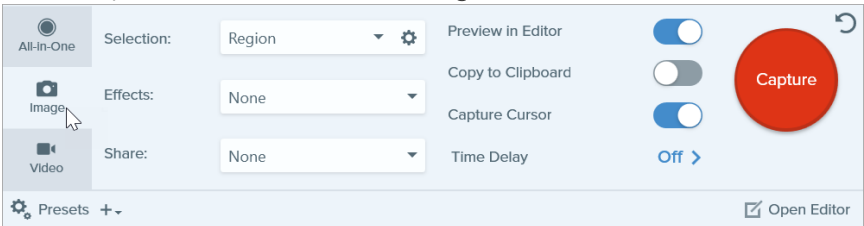

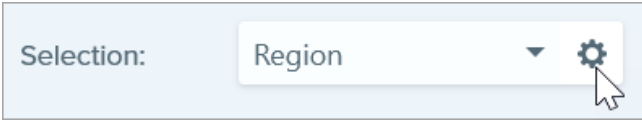

This help topic is for Snagit version 2020. If you have a previous version, upgrade to the latest version of [TechSmith Snagit](#) or view the help for another version in the [Previous Versions](#) section.

# Translate Text

The **Translate** option helps you to quickly create images for multiple languages. Snagit extracts the source text from text annotations and callouts into a .xliff file to send to your translator. You can import the file into Snagit to automatically generate translated images.

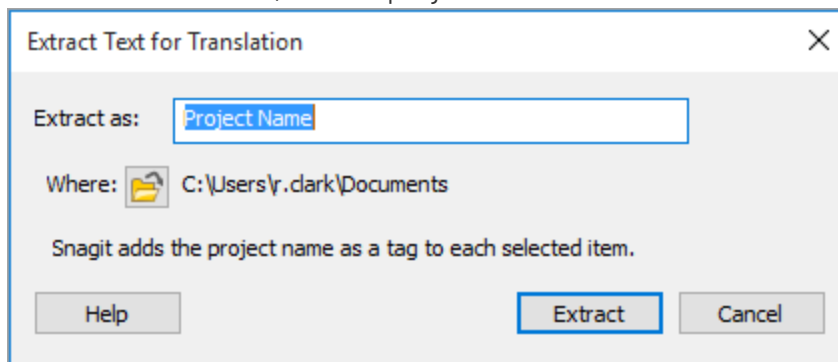

## Extract Text for Translation

Complete the following steps to extract text from text annotations and callouts to send for translation:

1. In the library, select .snag or .snagproj files with text annotations or callouts.
2. Click the **Translate** button to extract the text for translation.

3. In the **Extract As** field, enter a project name.

Snagit tags the source files with a project name and a language tag so you can quickly locate the images in the library.

4. Select a location to save the .xliff file.
5. Click the **Extract** button.
6. Send the .xliff file to your internal translator or localization vendor to add the target language translations.

## Import Translations

After the text translations are added to the .xliff file, you can import the file into Snagit Editor to automatically generate the translated images.

1. In Snagit Editor, select **File > Translate > Import Translation**.
2. Select the .xliff file that contains the translations and click **Open**.

3. Select the translated language from the dropdown and click **OK**.

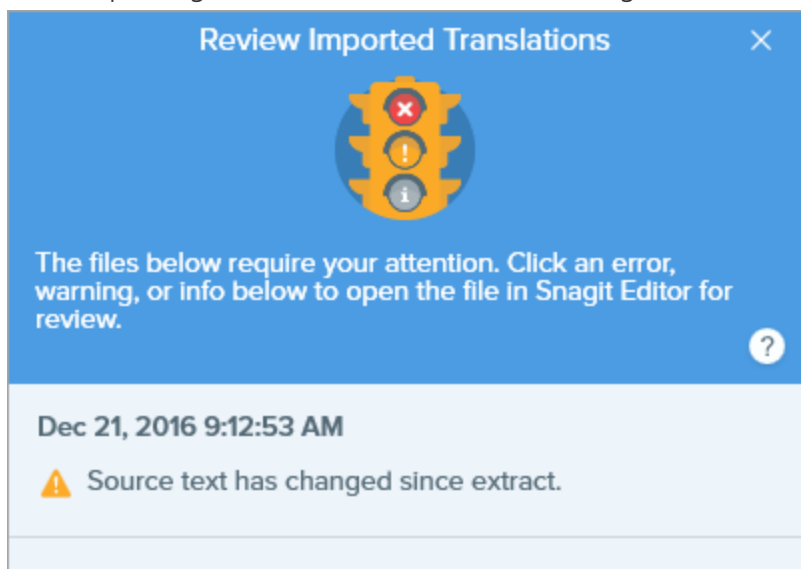

Snagit automatically generates the localized images based on the translations in the .xliff file. Snagit tags the translated images with a project name and a language tag so you can quickly locate the graphics in the library.

# Review Translated Images

After importing the translated .xliff file into Snagit Editor, the **Review Imported Translations** dialog appears.

To review an item:

1. Click an [info](#), [warning](#), or [error](#) message in the dialog to open the file on the canvas.

# Mac OS Permissions

Permissions are required for Snagit to capture, edit, and share images and videos. A dialog appears when a permission is needed.

# Manually Edit Permissions

1. Select **Snagit menu > Preferences > Capture tab**.
2. Click the **Fix Capture Permissions** button.

3. Click **Enable** or **Edit System Permissions** to enable each permission.

The **Edit System Permissions** option opens the Security & Privacy System Preferences dialog where permissions can be enabled/disabled directly in the Mac OS.
